

TECHNOLOGY MEETS INNOVATION

ENGAGE WITH CHRL

MESA is a pioneer in the engagement industry. We have seized this multi-industry opportunity, with the Microsoft Kinect, and creatively combined the world of technology, data analysis, meaningful interaction, and engagement.

ENHANCED SERVICES

MESA offers a wide variety of services beyond CHRL's gesture-controlled, voice recognition and interactive technology. These additional services will further enhance engagement opportunities:

Virtual Reality

With this service, people engage with a computer-generated 3D environment that is interacted with in a seemingly real way. Virtual environments are created via 360° filming or 3D development to teleport the user beyond reality. Maximize the virtual reality experience with 4D Installation that impacts all senses to further teleport the user to a completely new dimension.

Mixed Reality

With this service, customers experience new environments and visualizations where realistic digital objects or event animations allow interaction in real-time. *This opportunity could provide holographic vision for surgeries.*

Interactive Projections

With this service, customers experience a dynamic, hands-on interactive surface display that encourages customers to touch, grab and pick up objects. This interaction not only rewards customers with information, animations, and engaging content, but also produces statistical data. *This opportunity could provide gesture controlled medical images, as well as auto-hand hygiene tracking.*
