

# Glenmont Park

## Proposed Design

### Interactive Fire Truck Illusion.

Gilbert, Chyatte, Goldberg

**The front view** of the sculpture will be positioned to be visible from the viewing path and to cars driving by. Based on our team's own *Van Go* (submitted) the sculpture will be engineered to be fixed in place, yet appear to rotate in an unexpected direction when viewed while walking by or driving past. The angles of the panels that comprise the sculpture are the key to making the front appear to get larger while the side recedes.

**The Back Side** of the sculpture will include stools positioned behind each of the truck's windows. Alongside each of the windows, a large push button switch will be mounted to operate solar powered lights that can be flashed on and off by children playing with the truck. A muted bell will be mounted on a pole alongside the truck for children to use to sound a pretend fire alarm. The sculpture will be surrounded by molded play surface with street striping for additional play area around the sculpture.
