

digital transformation

a digital solution for your company has to be designed around your specific needs.
a readymade software **cannot** be patched on to all existing processes

imagine, a cloud-based platform that shows all your ongoing projects:

click

project status, planned work for the upcoming week, issues, and risks

click

latest project photographs

click

project cost information: PO value, billed value, costs accrued

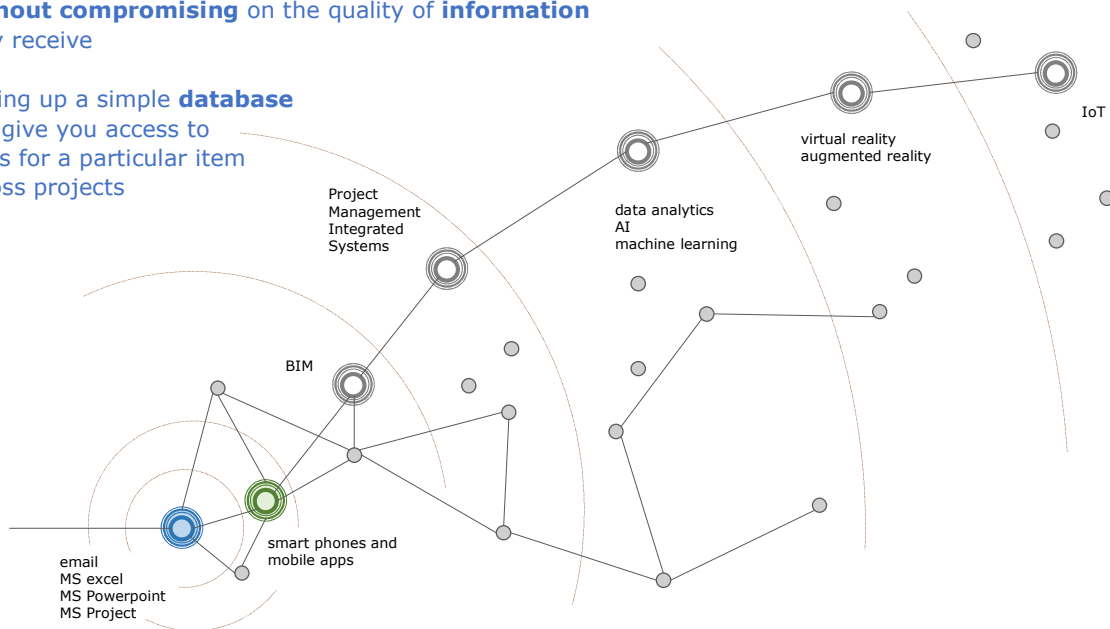

click

consolidated information on multiple projects

would you like to see a **dashboard** with **status** of all your projects and the **constraints** highlighted for you to ask the right questions?

imagine the impact, if you can **demonstrate** to your clients
that doing projects with you will minimize their on-site time
without compromising on the quality of **information**
they receive

setting up a simple **database**
can give you access to
rates for a particular item
across projects

there is a lot that can be done in digitalising the work that you are already doing
give a call to discuss further

we are in the process of evaluating various cloud-based platforms for digital construction
management
