Nanotechnology**

Smaller particle size for quicker absorption

## Proprietary Nanotechnology

By CBD American Shaman

CBD American Shaman's nanotechnology represents the ultimate refinement of hemp oil concentrate. Our unique process gives unmatched particle size, putting cannabinoids in their most bio-active state. This minute size gives the cannabinoids a much greater surface area.

For example; Picture a basketball full of BB's sitting on your kitchen floor. It only covers a small portion of the floor. Now, picture the basketball breaking open and all those BB's spilling out. They spread out over the entire floor.

This is what our proprietary nano system does—it breaks large lipid balls full of cannabinoids down thousands of times to the molecular level.

## What's the difference between our proprietary nanotechnology and other nano CBD?

Our proprietary nanotechnology simply breaks down the particle size of the CBD to create water soluble CBD. "Nano CBD" typically used by others is a type of CBD isolate which removes the terpenes from the oil during the extraction process, resulting in the opposite of a "full-spectrum" hemp oil. Unlike nano CBD oil, our water soluble CBD products remain full spectrum, containing all the terpenes and cannabinoids that are found naturally in the hemp plant. In turn, these compounds all work together in what is called the "entourage effect" which means all the compounds are more effective when they are allowed to work together as Nature intends.

## Which is better: CBD oil or water soluble CBD?

Oils typically can't dissolve in water, hence the saying "like oil and water" meaning two things that don't mix. However, breaking down the particle size using nanotechnology makes CBD oil water soluble. CBD oil and water soluble CBD have different uses. [CBD oil](#) can be taken orally in a tincture or an edible product, or it can be used topically on the skin. Water soluble CBD can be dissolved in water and drank or used in some recipes. Since water soluble CBD has a much smaller particle size, the body can absorb the cannabinoids into the bloodstream much quicker than regular CBD oil.

## Proprietary Nanotechnology Takeaways

The smaller the CBD particle size, the easier it is for the cells of your body to absorb it and the faster it can get to work. You have a chance to feel the effects almost instantly so you can tell if the amount you took is working or not. It also means you're getting the most out of the CBD oil you do buy. That kind of total efficiency can ultimately add up to plenty of long-term savings as you continue to use CBD oil.
