Notes: Rate of Change / Slope

Find the rate of change of each of the following relationships.

1) (9, -1) and (12, -8) 2) $y = \frac{2}{3}x - 5$

5) A car traveling at a constant speed travels 165 miles in 3 hours and 385 miles in 7 hours. Find the car's speed by using both times.

Before The Classwork:

Which function has a constant rate of change equal to -3?

The graph below shows the distance in miles, m, hiked from a camp in h hours.

Which hourly interval had the greatest rate of change?

- $(1) hour 0 to hour 1 \qquad (3) hour 2 to hour 3$
- $(2) hour 1 to hour 2 \qquad (4) hour 3 to hour 4$

An astronaut drops a rock off the edge of a cliff on the Moon. The distance, y, in meters, the rock travels after x seconds can be modeled by the equation $y = 0.8x^2$. What is the average speed, in meters per second, of the rock between 5 and 10 seconds after it is dropped?

(1) 12	(3) 60
(2) 20	(4) 80

Classwork: Rate of Change / Slope

Find the slope of each relationship.

1)
$$y = -7x + 9$$
 2) $(-3, -5) (-9, 12)$

5) *Line 1* passes through the points (12,-13) and (-4,-1). A line formed from which of the following points has the same slope as *Line 1*.

- A (1,3) and (13,12)
- **B** (-2,5) and (13,25)
- **C** (-9,5) and (-1,-1)
- **D** (0,0) and (8,7)

The table below shows the cost of different numbers of goldfish at a pet store.

COST OF GOLDFISH				
Number of Goldfish	Cost			
5	\$1.50			
10	\$3.00			
15	\$4.50			
20	\$6.00			

The cost is a linear function of the number of goldfish. Which statement describes the rate of change of this function?

- A The cost increases \$0.30 each time 1 goldfish is added.
- B The cost increases \$1.50 each time 1 goldfish is added.
- C The cost increases \$3.00 each time 5 goldfish are added.
- D The cost increases \$6.00 each time 5 goldfish are added.

7) *Line 2* has a slope that is twice the slope of *Line 1*. *Line 1* passes through the points (5,6) and (15,21). What is the slope of *Line 2*?

- A 0.75
- **B** 1.5
- **C** 3
- **D** 6

8)

The table below shows the cost of mailing a postcard in different years. During which time interval did the cost increase at the greatest average rate?

Year	1898	1971	1985	2006	2012
Cost (¢)	1	6	14	24	35

(1) 1898–1971

- (3) 1985–2006
- $(2) \ 1971 1985 \qquad \qquad (4) \ 2006 2012$

A company that manufactures radios first pays a start-up cost, and then spends a certain amount of money to manufacture each radio. If the cost of manufacturing r radios is given by the function c(r) = 5.25r + 125, then the value 5.25 best represents

- (1) the start-up cost
- (2) the profit earned from the sale of one radio
- (3) the amount spent to manufacture each radio
- (4) the average number of radios manufactured

10)

The table below shows the average diameter of a pupil in a person's eye as he or she grows older.

Age (years)	Average Pupil Diameter (mm)
20	4.7
30	4.3
40	3.9
50	3.5
60	3.1
70	2.7
80	2.3

What is the average rate of change, in millimeters per year, of a person's pupil diameter from age 20 to age 80?

(1)	2.4	(3)	-2.4
(2)	0.04	(4)	-0.04

11)

The Jamison family kept a log of the distance they traveled during a trip, as represented by the graph below.

Elapsed Time (hours)

During which interval was their average speed the greatest?

- (1) the first hour to the second hour
- (2) the second hour to the fourth hour
- (3) the sixth hour to the eighth hour
- (4) the eighth hour to the tenth hour
