**Decal Installation Guide**

**Materials Needed:**

- Microfiber Cleaning Rag
- Rubbing Alcohol (IPA)
- Soap and Water

**Directions:**

1. Clean the surface you will be applying decal to by using soapy water. Wipe dry.
2. Wipe the freshly cleaned surface with Rubbing Alcohol.
3. Remove paper backing from decal. Go slowly and gently, the goal is to have all the vinyl stick to the transfer tape only. If some areas are troublesome, slowly reapply the backing paper without removing it and press the decal firmly together. This will help encourage the decal to stick to the transfer tape and not the paper backing.
4. Apply decal to the cleaned surface starting with one side and working your way slowly across. Once you have placed the decal you cannot reposition it!
5. Firmly press down on decal and transfer tape once on the surface of your choosing. You may use the backing paper (gloss side) as a buffing pad to help seal the decal down.
6. Remove the transfer tape slowly and gently. Again, start from one side and work your way across the decal.
7. One final wipe and your decal is now applied!

*Thank you for your purchase, we hope these instructions make the installation a breeze!*
