

Porsche 914 Carbon Fiber Dash kit Installation instructions

The Porsche 914 Carbon fiber dash kit is designed to replace the stock dashboard panels. Like carbon fiber hoods, the carbon fiber dash kit has the distinct carbon fiber look and feel. This kit is for the 914 owner that wants a custom look.

Installation of the carbon fiber dash kit is very easy because it is custom designed for the Porsche 914 and is cut with ultra-high precision using the latest CNC technology. This kit comes with 3M adhesive tape on the back and can be attached right to the existing metal dash. In fact the installation process will take most people 30 minutes or less.

Because there are several dash switch configurations, and depending on what options your car has, some modification will be necessary by adding extra holes. The easiest way to do this is to make a cardboard template by aligning the existing holes and marking the extra holes on the cardboard. Then next step is to transfer the holes by using taping the cardboard to the carbon fiber dash panel and carefully using a razor blade or x-acto knife. Please take your time as it might take several passes to cut all the way through.

Before you install the carbon fiber, remove the old weave type material from the dash. Depending on your car, there might also be a thin metal panel that the weave material is glued onto, remove this as well. Now clean off any old glue or adhesive and now would be a good time to touch up or repaint the dash.

Once the dash is prepped you might want to get an extra pair of hands to help out with the main piece. Start at one end and remove part of the 3m adhesive backing and attach the panel to the dash, now slowly peel the backer away as you press the panel onto the dash.

Good Luck!

Thank You!
