

Caring for your Human Hair Wig

1. ***Comb out wig before washing:*** Use a wide tooth comb and comb from the bottom of the wig to the top (small sections at a time). If your wig has a lace front or mono/hand tied top be careful combing these sections (excessive or harsh combing in these areas may result in the loss of hair).
2. ***Washing & Conditioning:*** Use a mild shampoo and conditioner (ex. Suave). It's not necessary to use heavy "reparative" or fancy types of products. Keep it simple! Hold wig under running water and rinse first. Use shampoo working in a downward motion from bottom to top. If your wig has a lace front or mono/handtied top ***DO NOT*** use excessive conditioner in these areas (too much conditioner may result in loss of hair)
3. ***Drying:*** Gently squeeze out any excess water. Place wig in a bath towel lengthwise or roll up and allow the towel to absorb water (10-15 min. approximately). Remove wig from towel and place on wig stand. At this time, you may use any styling product (leave-in conditioner, detangler, gel, mousse, etc.) if you choose. ***Finger comb in place and allow to air dry completely or halfway through before blow drying.***
4. ***Styling:*** You can use any hot styling tool (curling iron, flat iron, hot curlers, etc.) It's a good idea to use a thermal protecting product before using any hot tools (place a small amount in your hands first then work product throughout hair, especially the ends).

That's it!!!! Have fun and enjoy your new wig!!!!
