

Wig Care Instructions for Heat Friendly Synthetic

Wigs/Pieces

If you are wearing a wig everyday, wigs should be WASHED EVERY 2-3 WEEKS!!

Before washing, gently remove tangles with fingers or wide tooth comb. Begin at the ends and slowly work toward the roots to avoid damage. **DO NOT BRUSH!**

Add a cap full of wig shampoo to a basin of cool water. Soak for 20 mins. **DO NOT** scrunch or agitate the wig. (This process might have to be done 2 or more times for ultimate clean)

Rinse by holding under running cool water until it becomes clear.

Gently squeeze or use a dry towel to absorb excess water. **DO NOT** twist or ring.

Allow wig to air dry. Once dry apply a small amount of Synthetic Heat Safe Conditioner to the ends of the wig (**NOT** on the roots if wig has a mono top &/or lace front).

If the underneath or ends of the wig are frizzy, you can use a low/med heat flat iron (**ON ENDS ONLY**) to remove frizzies. The hair will be then be pin straight. To add curl or body, you can use Hot Curlers or Curling iron on Low/Med (up to 320 degrees) heat. If using a curling iron, hold or pin curl till hair cools.

You can also remove frizzies, by using a blow dryer on Low/Med heat with a wig brush. You will still need to allow hair to cool to keep a bend/curl in wig. **DO NOT USE HUMAN HAIR HAIR SPRAY ON THE SYNTHETIC WIGS!!**

You are now ready to wear wig. Comb as desired and enjoy!
