

## Synthetic Wig Care Instructions

**If you are wearing a wig every day, wigs should be WASHED EVERY 2-3 WEEKS!!!**

*Washing:* Wash in wig shampoo, using cool water. Gently “swish” by hand. Leave wig in the water for no less than 20 minutes (*hint: the longer you let it soak the cleaner the wig will be*). If the water is brown and murky, rinse the wig thoroughly and change the water and shampoo. Once the water is clear, rinse the wig thoroughly again in cool water.

*Drying:* Gently squeeze out any excess water, allow your wig to air dry completely on a wig stand or hang upside down using a skirt hanger. *Do not brush while wet.*

*Conditioning:* When wig is completely dry spray wig conditioner all over wig especially the bottom and underneath. Conditioner dries quickly.

*Styling:* After your wig is completely dry it can be combed/brushed into desired style. By using your wig wide tooth comb/brush or even your fingertips, many variations can be easily achieved.

*Please do not use electric-dryer or styling aids, such as curling irons or blow-dryers. Keep away from excessive heat or flame.*

***Use caution while cooking and opening the oven door. High heat can and will damage the wig.***

***DO NOT USE HUMAN HAIR HAIR SPRAY ON SYNTHETIC WIGS!!***
