

Platlet Rich Plasma Therapy

PRP is an injection treatment whereby the patient's own blood is centrifuged to separate out the platelet portion that is then injected back into the skin to stimulate new collagen production and to energize the cells into rejuvenating themselves.

The same process is also done for the hair to reduce hair loss and improve hair growth.

PRP is an effective concentration of multiple fundamental growth factors (GFs).

Safety of PRP

Because it is an autologous treatment there are minimal chances of getting blood borne infections .

There can be transient pain on injection site which normally subsides in few hours .

Can take Crocin 500 sos.

Results

If combined with Hair Meso and appropriate Oral and Topical Medicines the results are faster and stable .

Atleast 4-6 sittings are advisable .
