

Platlet Rich Plasma Therapy (PRP)

PRP is an injection treatment whereby the patient's own blood is centrifuged to separate out the platelet portion that is then injected back into the skin to stimulate new collagen production and to energize the cells into rejuvenating themselves.

It is also called **Vampire Facial**.

Safety of PRP

PRP is quick with almost no down time.
It is an office based procedure.

Because it is an autologous treatment there are minimal chances of getting blood borne infections

#There can be transient pain on injection site which normally subsides in few hours .

Can take Crocin 500 sos .
Ice pack also helps .

The results are visible within first sitting itself.

Normally 4-6 suitings are advisable depending on the concern at the gap of 3-4 weeks .
Can be combined with other procedures for better results.

Maintenance can be done with using appropriate serums and diet later on .
