Option Descriptions

Sandbox (Trial Access)

Our Sandbox is designed as the lowest-risk way to experience private AI. You can begin immediately, with the first month free and a simple per-user fee after that. Everything is fully managed by us, so there's no technical setup or administrative burden for your team. Annual service and support are included at no cost during the trial. The Sandbox is ideal for

pilot projects, proof-of-concept initiatives, or introducing leadership teams to the potential of secure AI before making a larger commitment.

Local Private Server (On Your Network)

The Local Private Server option is for organizations that want maximum control and compliance. We provide a dedicated AI server installed directly within your network. This includes full configuration, monthly reporting meetings, and training for a designated staff member to serve as administrator. With all compute and data staying inside your environment, this option delivers the highest level of security and sovereignty.

Hosted Private Server (On Our Network)

With Hosted Private Server, you get all the advantages of a dedicated private AI environment without the overhead of running it inside your infrastructure. We host the server securely on our network, while your team is trained to handle basic administration. This balance of convenience and security makes it an attractive option for organizations that want enterprise-level AI without extra IT load.

Leased Private Access (Shared Server)

Our Leased option provides a cost-effective way to run private AI. You gain access to a secure, shared server environment, with your own private workspace. This option includes a modest setup fee, ongoing monthly base fee, and a per-user rate. We provide one hour of administrative support each month, and any additional needs are covered at a discounted hourly rate. This makes Leased Access ideal for businesses that want to get started quickly with a managed service, while maintaining flexibility and scalability as they grow.
