

Structured Water Created By Clayton

Whole House Unit

House	Stainless Steel Housing, Flowform HDPE, High Density Poly Ethylene, food grade
Specs:	6.9 inches / 17.5cm (L) X 3 inches / 7.6 cm (Diam.) Two - 1 inch NPT (F), for inline Installation. Wt. 3.2 pounds

Important Notes About The Use of Your House Unit

Product Description:

With a Whole House product you will have Structured Water literally at your fingertips throughout your home. Enjoy all the benefits of Structured Water for cooking, drinking, showers or baths, laundry, gardening, pets and so much more.

Everyone benefits from the energetic properties of Structured Water, through entrainment it will lessen your ecological footprint and benefit your whole community.

Structured Water Created By Clayton - Some of the Many Benefits:

- Super hydration, (reduces the need to consume as much water)
- Water that has neutralized all adverse toxicants and is ready to enhance life.
- Eliminates itchy skin from chlorinated water
- Rapid hydration
- Accelerated detoxification
- Normalized blood pressure and pulse rate
- Increased Oxygen content in the blood
- Enhanced thought processing, mental awareness and creativity.

Maintenance Free

- Cost-free Operation
- Zero Processing Wait Time
- Zero Limit on Processing Capacity
- Zero Replaceable/Breakable Parts

**Thank You
for your Purchase**

**Thanks for helping maintain a
green earth environment.**

Structured Water Created By Clayton

Carefree Ease of Use

***** Note: These units have a Flow Direction.**

Output side of the unit is indicated to the **(right) side of the unit label.**

Input side is indicated to the **left of the Symbol** on the **(left) side of the unit label.**

Recommend installation on Cold Water Line.

All install-able products are engineered for simple installation with standard plumbing parts. **We recommend that you call a licensed plumber or qualified handyman.**

IMPORTANT NOTES FOR HOT WATER HEATERS BEFORE AND AFTER INSTALLATION

Before installation, drain the hot water heater for a few minutes to flush sediments / old deposits that may have collected in your hot water tank.

NOTE:

On hot water heater drainage, a good measure would be drain into a 5 gallon bucket. Only fill the bucket, let it cool before dumping. Check to see the amount of sediment discharged.

Future drainage will depend on the amount of sediment. If the heater is not drained the sediment will appear in the bottom of a bath, in screen filters, toilet valves etc. Eventually Structured Water will dissolve it all and there will no longer be any problems.

Drain the hot water tank again in 3-days following initial install and then again after 2 full weeks from date of installation. Failure to do so may result in damage to the hot water heater. After installation, tap water may exhibit discoloration temporarily as sediment is flushed from the system. If in doubt with any part of this procedure, it is strongly recommended to consult an experienced plumber or handyman prior to installation.

Cleaning:

Normal inline operation of the installed product will continuously clean the product.

NOTE:

Structured Water research shows Structured Water incorporates the vibration of its immediate surroundings. Further study shows, that Structured Water diminishes quickly in environments in which there is adversity and chaos and lasts longer in a harmonious peaceful environment.

It has also been discovered that Structured Water can incorporate the energies of thoughts and beliefs. You can, therefore, support the water's fine quality by maintaining an attitude of positive expectations about the water when you prepare or use Structured Water.
