

Please take a few minutes to read about our new app designed to help small business owners, local communities, and special needs families. Our first mission is to focus on Autism, and families with special needs children. Our goal is to build a world class Respite Care Center in the Cumming, GA. area with complete funding for families and professional care without any State assistance.

My name is Steve Schroeder, founder of Smart Community Technologies. I have a 14-year-old autistic son who is non-verbal, a big challenge to say the least, but a special love that can't be described. We moved from Colorado where we had Respite Care help, financially, physically, and emotionally. Our first goal is to build a Respite Care Center in the Cumming, GA area of Forsythe County. We plan on combining professional staffing with college aged kids who are pursuing a special needs degree or desire to work with kids. We want to provide amazing physical, emotional, and spiritual care at no charge to families who need it, or a small fee for any family with special needs children.

I attend Browns Bridge Church in the area, and our mission is similar to theirs, but of course very different. We desire families of every faith and belief to participate, but our foundation will be a commitment to the spiritual needs of families. Many times, the stress of life causes us to lose focus, we want to extend a helping hand to those who need it and portray the love of Christ to everyone, no strings attached. After all, we believe Jesus Christ is the ultimate form of Respite Care, and He extends this invitation unconditionally, to all of us, we want to do the same.

I also have a 30-year-old daughter with neurofibromatosis, (tumors throughout her body). She is legally deaf, blind, and been through many surgeries, yet recently graduated from California State University Northridge. She is a testimony to all of us, staying strong in her faith, and dedicated to helping others while she is alive.

Many families are affected with similar situations, and I think it's time we start to ReThink Technology, and use it in ways that benefit everyone.

What if a small membership fee (similar to Amazon Prime), not only gave everyone in the community amazing value from local business, restaurants, and entertainment venues, but also provided the funding for important community causes? What if the same membership fee leveled the playing field for small business owners, giving them the tool to compete with large brands, discounting, and online competition? Sound intriguing?

Amazon Prime generates over 8 Billion dollars per year in membership fees alone. Around 80 million members pay \$100.00 per year to get free shipping and a few other benefits. Do you think 80 million people would pay \$100.00 per year if they received much more than free shipping, how about a lot more?

We think communities will work together when we show them innovative strategies with the creative use of technologies designed to make a difference. We have a small amount of time to make a big difference.

We are launching with flagship sponsors to create a new form of membership (much better than Amazon Prime, and much better than Pokemon Go!). We plan on raising millions of dollars (if not more 😊), for special needs, schools, and other important needs in ways which have never been done previous, will you join us?
