

Utilizing Automated Data Improvements to eliminate staff key strokes and rework to reduce operating expenses and generate revenues

Problem

Today's healthcare provider organizations are in a unique position to other businesses in the US. They provide care to one entity, and often getting paid by multiple entities such as primary insurance, secondary insurance and patients for the care provided.

Securing, verifying and maintaining accurate data on these entities is difficult, labor-intensive, and time-consuming. Healthcare organizations spend hundreds of millions of dollars each year manually correcting and maintain their patients and insurance data.

Solution

Through Waveland's Data-as-a-Service solution, DAYS (Data-at-your-Service), Waveland delivers updated insurance and patient information that is critical to patient communications and reimbursement directly to healthcare providers.

DAYS corrects and enhances the information in current systems and ensures that you are sending insurance claims to the correct payers and patient statements to the appropriate address.

INTELLIGENT APPLICATIONS

- Applications that enhance current processes with external data sources and automation
- Analytics at the point of decision making
- Information delivered where, when and how it is needed

ANALYTICS AS A SERVICE

- Assisted decision making and faster time-to-insight
- Consistent, better and more informed decision making across the entire organization

DATA AS A SERVICE

- Replacing manual effort with data sources and automation
- Decreased cost through staff productivity increases and the elimination of manual tasks and operator errors
- Increased revenue through accurate insurance and patient billing

DATA LAKE

- Data resource access with faster response times
- More flexible data management and data delivery delivery

Data-at-your-Service

Replacing human key stroked with automated data improvements

The real value of Data-as-a-Service is that a majority of the human errors associated with maintaining the data as well as the FTE's involved in maintaining the data are reduced. This frees up staff to perform more value-added tasks within the organization. Making your current staff more productive and efficient.
