with every ten pack!**

Integrated Upright
Mounts To Any Solar
Module Rail System

Integrated Flex Point
Prevents Bolt Tension
From Cracking Tiles

NO ROOF PENETRATION & NO TILE REMOVAL

The IR-T1 is the first tile roof hook that is 100% non-invasive, and its no penetration design along with our patent pending concrete adhesive installation method actually increases the strength of the entire roofing system. No roof warranty issues to deal with, and a huge selling point for homeowners to go solar without worrying about a leaking roof after the solar installation is complete.

FOR USE WITH ALL RAIL SYSTEMS

Each IR-T1 includes an integrated upright with a large solar rail height adjustment slot designed for use with any standard rail system (IronRidge, SnapNrack, K2, Unirac). This mount is meant to replace traditional tile roof hooks with a faster and easier system with very minimal training required.

HIGH-STRENGTH TESTED

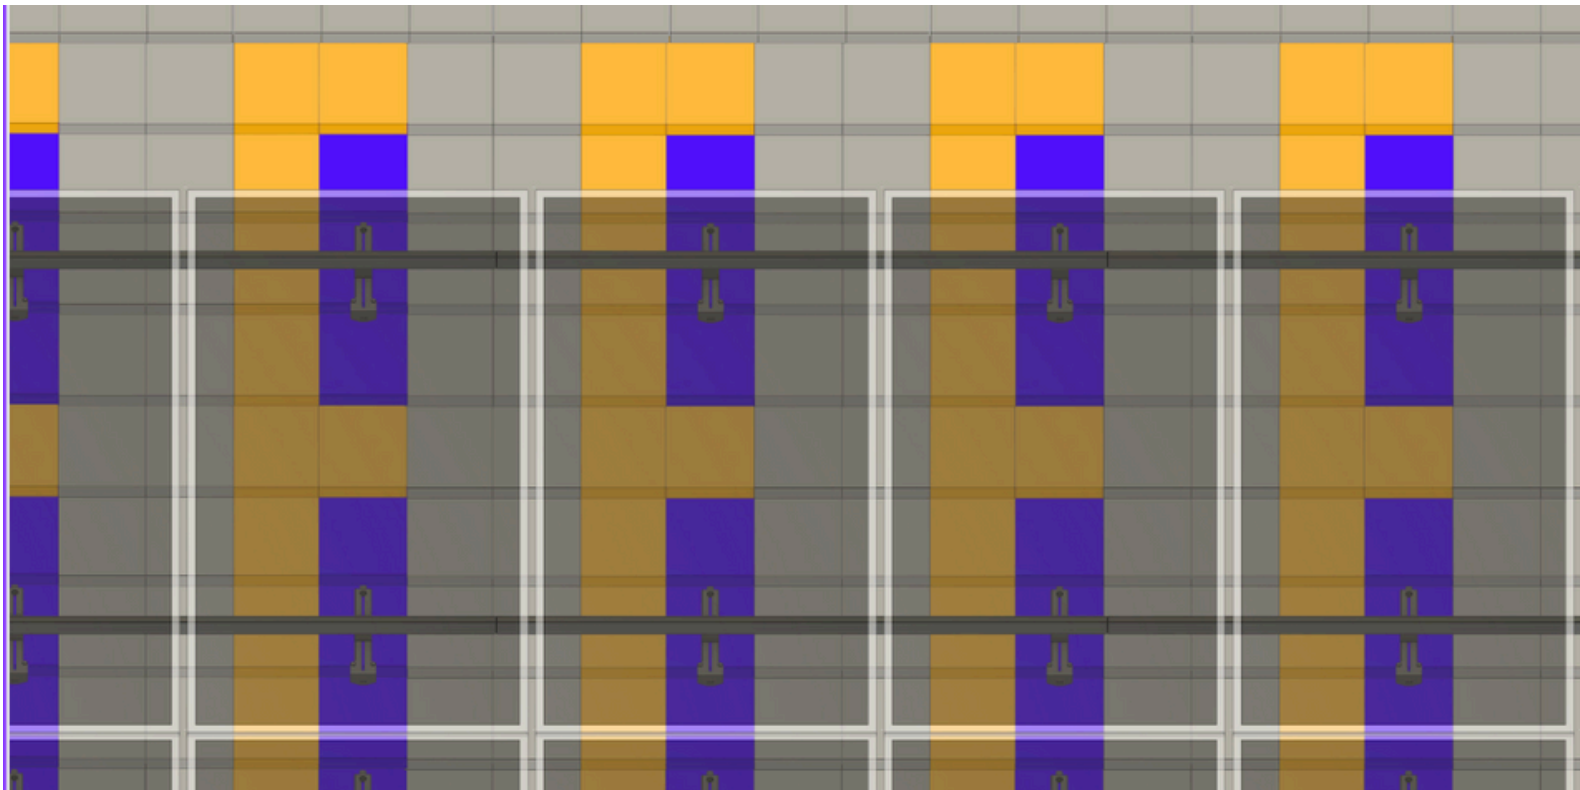

The IR-T1 utilizes our high-strength tested IntegraGel to bond three roof tiles together along with the IR-T1's two integrated mounting hooks bonded as one piece. This unique system creates a large heavy ballasted foot out of the three concrete roof tiles, and these bonded roof tiles are also held down and nested in place by five additional overlapping tiles (see back for example).

LIGHTNING FAST INSTALL TIMES

With its 100% non-invasive design and easy mounting system, installation times are 4x faster than traditional tile roof hooks. The IR-T1 is by far the fastest and strongest mount available without the risk of breaking roof tiles.

See How The IR-T1 Transforms Standard Roof Tiles Into a Large Nested Ballast Foot!

IntegraRack® backs all of its products with a 25 year limited product warranty. IntegraRack also guarantees that all products are build to withstand the harshest environmental conditions when properly installed.
