

Channel Nuts: Long Spring

- General Application : Channel Nuts allow contractors to securely place a fitting, junction box, electrical panel, or pipe clamp in a precise location along the entire length of the channel. Simply insert the channel nut into the trough of the channel, and twist the nut into position so that the grooves are aligned with the internal edges of the strut. Threading and tightening a screw into the hole causes teeth located in the grooves to bite into the channel edge, positively locking the nut in place so it can't slip.
- Materials : Low Carbon Steel
- Standard Finishes: Zinc Plated

Cat No	Thread Size	Specification(mm)		Thick
		Length	Width	mm
L-1406	1/4-20	34.5	19	6.0
L-1209	3/8-16	34.5	19	9.0
L-3809	1/2-13	34.5	19	9
