

Swale Mix

Swale Mix is designed to help establish resilient vegetated basins within swale systems. These basins play a crucial role in storm water management by capturing, storing and filtering runoff. The also help control the velocity and volume in which water is released into storm water systems. Our mix creates an excellent growing environment for grasses and plantings, as well as providing a natural high pollutant trapping efficiency for sediment, grease, oils, and bacteria. Crucially our Swale Mix is **CCC Swale Mix approved**.

Benefits

- Great draining properties, helps reduce water pooling
- Assists with erosion control
- Improved stormwater management
- Helps filter pollutants from stormwater overflow

Compliance

- CCC Swale Mix approved
- 2A Sand
- First Class Soil
- Heavy Metal Testing on soil
- Sample is stored for 3mths in Intelligro library

Product Specifications

- | | |
|--------------------------|-------------|
| • pH Levels | 6.0-7.5 |
| • Hydraulic Conductivity | 50-300mm/hr |
| • Particle Size <10mm | 90-100% |
| • Bulk Density | 1,400kg/m3 |

Intelligro Swale Mix is formulated to provide healthy grass establishment and robust, long term growth. It also ensures more effective soil stabilisation, improved erosion control and water filtration.

 *This product is sustainably sourced and produced.*

Recommended Use

- Swales and basins
- Stormwater management systems
- Subdivisions and wetlands
- Sealed surface run off areas (carparks).

Inputs

- 2 Parts First Class Screened Soil
- 1 Part 2A Sand
