

# Green Roof Mix Boost

Green Roof Mixes are created using carefully selected light-weight materials that work together to establish a suitable growing environment for plants, as well as meeting engineering standards for roof top planting. Green Roof Mix Boost offers a balanced solution for extensive and semi-intensive green roofs, suitable for both residential and public buildings, and moderate-scale commercial projects, with improved nutrient content and drainage when compared to our Green Roof Mix Bio. The added controlled release fertiliser gives you confidence the plants will have a better chance of success when going into their new environment.

## Benefits

- Lightweight Composition
- Excellent drainage and water management
- Establishes and maintains healthy plants on roof tops
- Biodiversity and Environmental benefits in urban settings
- Weed Free

## Compliance

- Hill Laboratory analysis completed
- Sample is stored for 3mths in Intelligro library

## Product Specifications

- pH Levels 5.5-7.5
- Particle Size <10mm >95%
- 6mth Fertiliser [CR] 2.5kg/m3
- Saturated Bulk Density 855kg/m3
- Bulk Density 700kg/m3

*Green Roof Mix Boost offers a balanced solution for existing and semi intensive green roofs, suitable for urban streetscapes, public buildings and moderate-scale commercial buildings.*

 This product is sustainably sourced and produced.

## Recommended Use

- Green Roof planting
- Planter beds on roof tops
- Green spaces on public buildings, schools, and urban infrastructure
- Commercial and residential buildings

## Inputs

### Media

- Horticultural Bark Fines
- Pumice
- Coir

### Fertiliser

- Controlled Release Fertiliser
- Bark Amendment Fertiliser
