

Lawn Topdressing Mix

Lawn Topdressing mix is a blended soil amendment specifically designed to improve the quality, health, and appearance of new and existing lawns. It is used extensively in the landscape and professional turf industry due to its ease of handling and great growth-enhancement properties. This product is also excellent for filling in any patches or holes for repair and maintenance jobs. It is important to keep a good supply of water on while the seed is developing to prevent the mix drying excessively.

Benefits

- Healthy grass growth
- Easy application for spreading and levelling
- Great for seed germination and turf establishment
- Suitable for sowing seed or hydroseeding onto
- Optimal drainage

Compliance

- Soil is Heavy Metal tested through Hill Laboratory
- Soil sourced from approved sites
