

Wood Bio Fuel

Intelligro's Wood Bio Fuel is produced from sustainably sourced virgin timber logs, making it an excellent choice for boilers where both material quality and performance are paramount.

Our advanced facility ensures that clean logs are stored appropriately, with all screening processes conducted on asphalted surfaces to prevent external contamination. This meticulous approach guarantees superior performance while minimizing maintenance and manual cleaning requirements for your boilers. Additionally, our large, covered storage bins keep the moisture content of our product consistently below the industry standard of 35%.

Benefits

- Carbon-neutral fuel
- Provides a consistent heat
- Consistent particle size

Recommended Use

- Biomass boilers
- Commercial operations
- Specialized industrial heating systems eg. Hospitals

Compliance

- Weekly moisture content readings
- Moisture content reading for every specific load
- Consistent grading
- Contamination free screening and storage

Inputs

- Virgin timber logs

Product Specifications

- Particle size 24-40mm
- Moisture content <35%

Our wood fuel is sustainably sourced and serves as a renewable energy alternative that can conserve energy and reduce greenhouse gas emissions.
