World Health Innovation Summit Health-Focused Proprietary Impact Model

Your stakeholders are increasingly basing their decisions based on your environmental, social and governance (ESG) credentials and values.

Consumers are choosing brands for their ethical behaviour and their record on climate change. Investors are favouring businesses with robust ESG frameworks. And governments are implementing regulations requiring organisations to increase transparency in areas such as diversity, equal pay, carbon emissions, modern slavery and alignment to the UN SDGs.

That makes your ESG efforts crucial to long-term value creation and growth. We believe that sustainable growth is the only way to build a successful business and have a lasting positive impact on our environment and society.

Healthcare is a topic that is increasingly linked to economic and social value. That's why we've published our Health-Focused Place-Based Impact Model: Integrating Health, Climate, and ESG Negative Screening for Sustainable Impact in 2024.

By integrating health, climate, and ESG negative screening, the Health Focused Impact Model offers a comprehensive approach towards sustainable impact, aligned with the United Nations Sustainable Development Goals.

This model enables businesses to align their operations with health and climate goals, contributing to the well-being of communities and the planet. Implementing this model will require collaboration among businesses, governments, and other stakeholders, fostering a collective effort towards achieving the SDGs and creating a more sustainable and resilient future.

"The future of business is aligned to societal value and aligning your business strategy with the SDGs gives us a once in a generation chance to accelerate change, create new and meaningful jobs while leaving no-one behind"

Gareth Presch, CEO, WHIS
