Reach-in coolers for back bar, draft beverage, and food service applications

Two refrigeration platforms to meet your needs:

End-wall refrigeration

Space-maximizing refrigeration

C1FB60

C1SB48

Our end-wall refrigeration design locates the evaporator above the compressor compartment to free up interior space for maximum storage capacity.

Our space-maximizing refrigeration design minimizes the width of the compressor compartment to provide increased capacity and functionality not normally found in a compact footprint.

End-wall refrigeration models are fully serviceable from the front, making them ideal for built-in applications.

Available in 32" or 36" one-door models, 52" or 60" two-door models, 72" or 84" three-door models, and 92" or 108" four-door models.

doors removed for illustration

Space-maximizing models are serviced from the side, so they are not intended for built-in applications.

Available in 24" or 28" one-door models and 36", 44" or 48" two-door models.

Reach-in cooler flexibility, features, and options

Two height profiles

Available in 35" bar-profile height or 29" low-profile height, not including the optional finished top, legs or casters.

Easy-access interior

Doors open 180° and bar-profile door openings are sized to provide unobstructed access to a full-height keg, two rows of 750ml wine bottles, three rows of long-neck beer bottles, or four rows of 6" pint glasses.

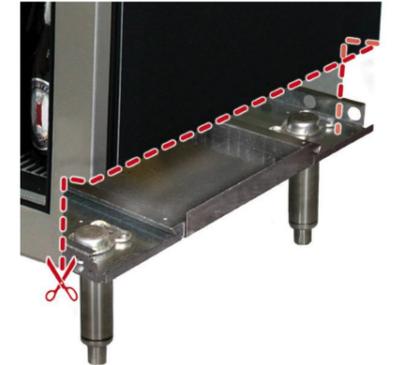

Two-zone models

Available as two-zone coolers with an insulated wall separating two independently controlled temperature zones, letting one cooler do the job of two.

Durable base

A 16 gauge galvanized steel base with an interlocking, multi-bend design provides incredible strength and rigidity.

Draft beverage compatible

Any bar-profile door section may be converted to full- or narrow-width keg dispensing, depending on doorsize.

Impact-absorbing scuff plate

All door openings on bar-profile models include an impact-absorbing scuff plate to protect the lower threshold when loading kegs.

Drawers

Any door section on bar-profile models can be converted to two drawers. Plus, any door section on space-maximizing, low-profile models can be converted to two drawers.

Food service ready

All one-zone coolers are listed to NSF Standard 7 for open food storage, making them ideal for food service applications also.

Built-in appearance

Available without a finished top for integrated installation below customer-supplied top.

Multiple door styles

Solid or glass doors available in black vinyl-clad, grainline stainless, three styles of jeweled stainless, or laminated. Solid doors also available unlaminated (not shown).

Additional reach-in refrigeration models

C1FU60

Undercounter coolers

Low-profile coolers are available in an undercounter configuration, which includes a 24-1/8" deep stainless steel finished top, pull tab handles, 110° hinge, and a choice of casters or legs.

CS1FB52

Shallow-depth coolers

Shallow-depth coolers are end-wall refrigerated and bar-profile height with a front-to-back depth of 18" to conserve floor space. Available with two or three doors.

Reach-in frosters

Reach-in frosters operate at a lower temperature range, making them ideal for frosting glassware or holding specialty cocktail ice. Available with one or two doors and in bar-profile or low-profile heights. Drawers available on most models.

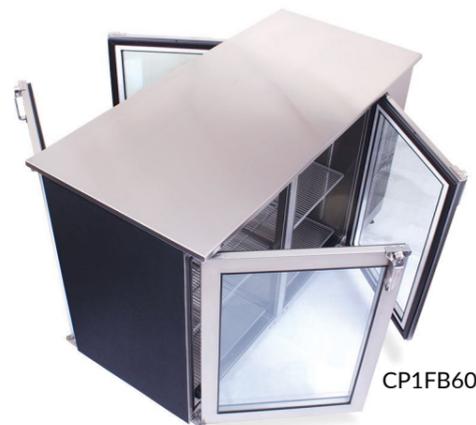

F1SB24

Wide-mullion keg cooler

While most Glastender reach-in coolers are draft compatible, this wide-mullion, direct-draw cooler is specifically designed to hold three 1/2 barrel kegs within 72 inches. A variety of beverage tower options are available.

KC72

CP1FB60

Pass-thru coolers

Pass-thru coolers have hinged doors on the front and back, making them ideal for island bar and food service applications. Only available with end-wall refrigeration. Available with one, two, or three sections and in bar-profile or low-profile heights.

CS1RB40

Remote coolers

Remote coolers are insulated cabinets with an evaporator housing that must be connected to a remote condensing unit. Reach-in, pass-thru, and shallow-depth models are available with heights and number of doors varying by model.

Slide-top coolers

Maximum capacity with minimum space

ST48-S

Our durable, 24" deep, slide-top coolers provide incredible storage capacity. Available in 24" to 96" lengths and with stainless steel or black vinyl-clad exterior.

Flush sides

Smooth, flush sides so no gaps are created between the cooler and adjacent underbar equipment.

Pull-out condensing unit

The condensing unit is designed to pull-out for easy servicing.

Durable top design

Incredibly strong, one-piece top design with integral mullion will not bend or sag.

Stout door sliding ledge

The stout door sliding ledge is supported by the wall of the cabinet so the ledge will not break or collapse.

Radius interior

All stainless steel interior with radius interior corners for easy cleaning.

Integrated locks

Built-in door locks included so no hasps are required.

Adjustable racks

Includes adjustable divider racks to prevent tipping between sections.

Slide-top frosters

Top-accessible froster storage

MF36-S2

Our durable, 24" deep, slide-top frosters operate at a lower temperature range, making them ideal for frosting glassware. Available in 24", 36", and 48" lengths and with stainless steel or black vinyl-clad exterior.

Durable top design

Incredibly strong, one-piece top design with integral mullion will not bend or sag.

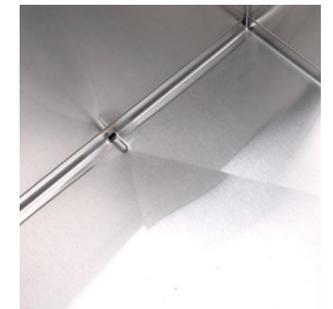

Stout door sliding ledge

The stout door sliding ledge is supported by the wall of the cabinet so the ledge will not break or collapse.

Interior floor drain

Radius interior with floor drain routes moisture during defrost cycle to automatic condensate evaporator pan so no drain connection is required.

Flush sides

Smooth, flush sides so no gaps are created between the froster and adjacent underbar equipment.

Defrost cycles

Includes two convenient defrost cycles: automatic and manual.

Pull-out condensing unit

The condensing unit is designed to pull-out for easy servicing.

Optional shelves

Bottom racks standard on all models. Available with two additional layers of split shelving for rotating stock.

Bar refrigeration accessories and related products

BGS-24

Back bar glass storage

Open-front, bar-profile glass storage cabinets, available in 18", 24", and 30" lengths.

MS20-SS(L)

Machine stands

Reduced-height, reach-in dry storage cabinets for back bar applications. Available with one or two doors.

DS24

Dry storage

Reach-in, bar-profile dry storage cabinets available with one, two, or three doors. Single-door, low-profile unit also available.

FRA-24

Ice cream freezers

Underbar ice cream freezer with dipper well. Available in 24" or 36" lengths to hold one or two 3-gallon tubs, respectively.

BLD-24

Bar back liquor displays

Open-front, bar-profile, four-tier liquor display cabinets. Available in 6" incremental lengths from 18" to 48".

LLD2-24

Lighted liquor displays

Countertop, tiered displays for merchandising liquor bottles. Available with two or three tiers.

CS18

Condensing unit cabinets

18" wide remote condensing unit storage cabinet.

GDU-16X36

Ice displays

Countertop ice display units provide ice-chilled bottle merchandising. Available in all stainless steel or with glass front/back panels.

IDU-12X24
