

Get your SpeedWeek VP fuel on the SALT!

That's right, your entire racing fuel needs at the track. No more stopping at gas stations, Fuel depots or lugging around heavy fuel containers.

2022 SPEEDWEEK Event Fuel

These are the only “Event Gasoline” Available at SpeedWeek
For Record Attempts in Gas Classes

You must use one of the following Fuels listed below.

VP C-10

We design VP C10 as the best non-oxygenated unleaded racing fuel on the market. To begin with, it does not contain any metal compounds and will not harm catalytic converters or oxygen sensors. Furthermore, it has a proven performance record, which includes numerous past SCCA and Ferrari World Challenge championships.

VP C12

The best all-around racing fuel ever made. Recommended for compression ratios up to 15:1, satisfying the needs of 75% of today's automotive race engines. One of the winningest fuels in racing history, C12 has been the preferred fuel for drag, circle track, and road racers in

North America and around the world. C12 is also the best all-around two stroke fuel. Works great in vintage air cooled two strokes as well as new engines.

VP C14

Recommended for high RPM engines with ultra-high compression ratios over 14:1. Spec fuel for NMRA and NMCA

and dominant fuel in NHRA Championship racing for decades.

X-14

is a non-oxygenated, leaded fuel, which exhibits less heat sensitivity than most fuels. Used in Big Bracket racing and NHRA Super Comp and Super Gas.

VP C16

Established a performance standard that still exists today for use in turbocharged engines, supercharged engines, and nitrous applications with CRs up to 17:1. C16 is one of VP's most popular blends.

VP MS100

Professional grade 100 octane unleaded blend for all forms of motorsports. Spec fuel for IMSA sports car racing in North America.

VP 110

Reflecting the consistent quality racers rely on from VP products, there is nothing standard about these 110 blends. Formulated for use in naturally aspirated engines with compression ratios up to 12:1.

FUEL CLASSES:

In fuel classes, any approved liquid fuel may be used. Examples of approved fuels are all alcohols and ethers, hydrogen, nitromethane blends, nitrous oxide, E85 and unapproved gasoline.

VP Event supplied for fuels classes.

VP M1

Racing Methanol has a 99.95% minimum purity – the highest purity available in the U.S. Compared to standard methanol's, M1 engines run cooler and are less subject to corrosion. VP uses only lined drums which prohibit rust, corrosion, and metal deposits.
