REPRODUCTION '32 ROADSTER PRICING

BODY

All fiberglass parts are hand rolled in Isotalic Resins. Glass material is a combination of chopped Glass, Matte, Unchopped Roving & Unidirectional Weave. While many debate the different techniques of laying up as being the "best", we have found that only a combination of all the lay-up methods produce a superior quality "street use" car body. Having made thousands of bodies since 1984, our opinion is backed by substantial experience over a long period of time.

\$4,800
