

Is laser therapy effective for nail fungus?

Laser therapy is well tolerated and very effective in promoting significant nail growth in patients with toenail fungus.

Studies show that laser therapy for toenail fungus is 98% effective after a single treatment.

How long does laser nail fungus treatment take?

The laser application time varies depending on the number of nails to be treated. It can be between lasting 1 and 2 hours.

There may be slight pain during use. The laser is performed with cold air support without the need for local anesthesia.

Will fungal nails return to their original shape? Heal fungal nail infections

not by themselves, they have to be treated. If left untreated, it can lead to soft tissue infections

(e.g. cellulitis, erysipelas). The aim of the treatment is to get rid of the nail fungus. the

Nails will then regain their normal appearance
