

Nail Fungus Laser Therapy

Nail fungus has been successfully treated with lasers for several years.

The laser treatment is painless and the nail remains intact. The laser kills the fungus and improves the body's defenses.

The nail can grow out healthy.

How does this work?

The laser beam penetrates the infected nail and as a result of its action inactivates it fungal growth. You can hardly feel the treatment, you may feel a little warmth.

How long does the nail fungus laser treatment take?

The treatment with our nail fungus laser takes about 30 minutes. – depending on the infestation –
