

Survival Water Treatment

Survival circumstances may be considered a life-threatening situation that requires life supporting preparation more substantial than that required for a short-term emergency. Survival preparation can be expected to support short-term emergency situations. It is not unusual for survival circumstances to last much longer than three days – several weeks and months is not uncommon.

Available water supplies must be treated to safe water quality. Debilitating water borne diseases must be eliminated.

The **CABIN** 'Clean Water Filter' is ideal.

Advantages of the **CABIN** 'Clean Water Filter' include:

- Proven technology.
- Production of large amounts of safe water in a short time period. Sufficient water for drinking, cooking and hygiene.
- Compact and light weight.
- Rugged.
- Unlimited shelf-life. Efficacy of unused stored filter does not decrease with time.
- Simple to use and maintain correctly.
- Unlimited production life.
- Very little or no maintenance.
- No chemicals (except for recommended post filtration disinfection).
- No need for electricity.
- Easily decommissioned and recommissioned without loss of functionality.
- Inexpensive.
