contact email: manzcabin@shaw.ca

The CABIN Clean Water Filter treats water so that it is safe for human consumption. It is designed for use in isolated homes or cabins, homes in communities without access to safe drinking water, camps, emergency supplies, boats, barges and recreational vehicles. Electrical power is not required.

The CABIN Clean Water Filter is effective, compact, lightweight and portable. It is used to remove particulate matter and disease causing organisms from surface water (rivers, ponds and lakes), groundwater (wells and springs), captured rainwater and unsafe municipal supplies (piped or delivered). The CABIN Clean Water Filter can produce up to 12 litres of filtered water in one hour. The filter is manually operated and simple to clean. It is used as required.

Water produced by the CABIN Clean Water Filter is free of all types of water borne parasites such as Giardia and Cryptosporidium, and larger organisms such as Bilharzia and Guinea Worm and spores of infectious fungi. Most bacteria and viruses are also removed. Cholera is completely removed. It is strongly recommended that filtered water be disinfected using chlorine tablets or household bleach and safely stored and dispensed to provide treated water that is both aesthetically pleasing and free of disease causing organisms. The ability of the CABIN Clean Water Filter to remove disease causing organisms has been verified by independent laboratory testing.

The CABIN Clean Water Filter will not remove dissolved substances. Other filters are available for this purpose.

The CABIN Clean Water Filter is intended to be placed on a table or counter-top safe from unwanted disturbance. It is used by removing the lid and pouring water to be treated directly into the top of the filter. Filtered water is immediately produced from the filter outlet.

The CABIN Clean Water Filter is constructed using food grade plastic and media.

The filter is 50 cm tall and 30 cm wide at the lid. When filled with media the filter and accompanying commissioning kit weigh approximately 15 kg.

The filter construction is very durable and should provide satisfactory service for many years. With normal use the media will never require replacement.

The treatment and cleaning processes used by the CABIN Clean Water Filter are similar to those used in the millions of BioSand Water Filters used around the world for more than twenty-five years.
