

## **AIR CONDITIONER CONDENSATE LINE**

### **CLEANING INSTRUCTIONS**

- Remove the cover off the front of the air conditioner unit
- Locate the clear plastic line that connects to the unit
- Remove the line from the copper line that it's connected to
- Clean out the clear plastic line in your sink using water and bleach, make sure all the "slime" is removed
- Check the line for any holes, if you find any you will need to replace the line
- Change the filter if needed
- Re-install the clear plastic line, if the line appears to be loose, use a hose clamp to fasten it

***If you are proactive and perform this process in the beginning of the summer before it gets hot, in the middle when it really starts to heat up and one more time towards the end, your neighbors and insurance company will thank you!***
