**A LOOK AT ECONOMY & MARKETS**

# Global

**MAGNUM** / OFFERED BY  
**SBI MUTUAL FUND**

Welcome certainty of –  
transactional globalisation, a  
political divide and  
differentiated fiscal stance.

A strong majority  
government influences the  
quantity or quality of fiscal  
deficits; if not both.

Having embarked upon an  
aggressive rate cycle, the Fed now  
finds itself entangled in balancing  
the political promise of lower taxes  
and a ‘still loose’ fiscal policy; as  
lower benchmark rates have ‘yet’ to  
be reflected in sovereign yields

This certainty weakened the  
US Economy’s resilience,  
triggered a decline in dollar  
index, and steepened the yield  
curve

Federal Reserve’s projections  
of lower growth expectation  
and higher inflation can pose  
incremental challenge in  
using fiscal and monetary  
ammunition.

# Domestic

Immunity of the economy is exceptionally strong with well anchored fiscal & current account deficit, implying 'stable' rates & currencies

Today's economy is characterised by abundant liquidity, low inflation, low rates, low credit growth and GDP consolidating at lower levels of 6.25% – 6.50%

RBI projections of lower inflation and higher growth bodes well for the combination of measured fiscal push and 'easier' monetary stance to revive growth momentum.

Collectively, at 5.50% operating rate, < 10% of credit growth, < 4% on inflation, 6.50% of economic growth and abundant banking liquidity – growth momentum and hence equity as an asset class has enough tailwinds to drive returns.

# Investment - in a nutshell

-  **Borrowing costs are going up for Governments across the world.**
-  **'Still elevated' benchmark rates in developed economies remain a solace to withstand incremental impact on growth.**
-  **Developed Markets Central Banks, influenced by fiscal adventure / political will are likely to cascade challenges to broader world – first through currency, then inflation and eventually rates.**
-  **Central bank's 'first love' will continue to remain currency followed by liquidity & interest rates; particularly for Emerging Markets**
-  **Indian economy finds cushion in not being over-heated with broad-based credit, leverage and fiscal pressures; albeit the markets are likely to reprice the risk premia basis valuations and incremental growth.**
-  **Markets will look up to Federal Reserve to address the steepening of US yield curve as a key enabler to redeploy risk capital. Extent & pace of steepness in the US yield curve remains a key monitorable for manoeuvring risk capital**
-  **Indian government is likely to 'buy time' in assessing the global backdrop before unleashing incremental ammunition to fast-track revival of growth momentum.**
-  **Collectively, at 5.50% operating rate, < 10% of credit growth, < 4% on inflation, 6.50% of economic growth and abundant banking liquidity – growth momentum and hence equity as an asset class has enough tailwind to drive returns.**

# Portfolio Returns - Navigating a challenging terrain

**It feels like a difficult terrain when**

- **Equity markets appear to have been caught between valuations and earnings**
- **Fall in fixed income yields looking up to find the balance between demand & supply**
- **We are about to go past the best of liquidity conditions**
- **Such low inflation prints are boon or curse?**
- **Growth regime looking for direction !!**
- **The world of T's – Trade, Tariffs, Taxes and Trump: Revisit or reimpose ?**
- **Investment portfolio bear more promise than business portfolio**
- **Risk appetite seeks immunity from volatility, drawdowns, visibility and some predictability in seeking returns**
- **Mileage seems to outlive speed !!**

## Drive Smart.. Invest Smarter...

**MAGNUM** / OFFERED BY  
**SBI MUTUAL FUND**

- Smooth journey: Visibility is high
- Economy is stable, geopolitical factors are calm
- Market trends are predictable and growth-oriented
- Investors can drive with confidence and minimal caution

- Challenging path: Requires focus and caution
- Macro instability, geopolitical tensions, trade wars
- Market volatility demands strategic planning
- Use of tools like asset allocation, hedging, and diversification

# For One, For All

**MAGNUM** / OFFERED BY  
**SBI MUTUAL FUND**

## ANXIOUS / NERVOUS

*When visibility on returns and volatility appears poor*

## CERTAIN / CONFIDENT

*When money can be required anytime, but not now*

## The Eternal Quest: Returns + Stability + Taxation!

### A COMMON MYTH ABOUT SIFs!

**SIFs get more flexibility on use of derivatives**

**And derivatives are risky.....**

**So, SIFs must be for aggressive investors.**

**Right?**

**WRONG!**

**Derivatives can be used to both enhance as well as mitigate risk**

**Therefore, SIFs can be designed as aggressive as well as conservative!**

# Little legroom for a firm footing

## Asset Allocation

Multiple asset class and instruments to seamlessly navigate market cycles

## Strategic Hedging

Hedging strategies to reduce portfolio volatility

## Seasoned Professionals

Professionals to optimize multiple asset class and hedging tools across market cycles

# Multi-Layered

## EQUITY STRATEGY

Large cap skewed portfolio for ease in execution, agility and lower cost of liquidity

## FIXED INCOME STRATEGY

Accrual oriented portfolio for stable income generation as well as margin placement.

## DERIVATIVES

Arbitrage opportunities, collar strategies, and select unhedged short positions used for hedging and income generation

## PORTFOLIO

Allocation-attributes to enhance income generation by hedging as against risk optimisation for wealth creation.

Focus on equities with derivatives available to optimize risk management

# Derivatives For Risk Mitigation – Buying Puts

A put position becomes profitable for the buyer if the stock falls below the strike price. Buying it against an existing stock position can help protect downside.

The buyer however has to pay a premium upfront to buy the put. This is akin to buying insurance.

Eg: Jack holds the stock at ₹100 and pays a premium, of say ₹1, to buy a put option of ₹94 strike.

If the stock falls below the strike price (₹94), losses get limited as the profits from puts start to offset losses on further stock decline.

However, if the stock stays above 94, Jack ends up losing ₹1 (option premium).

Scenario	Stock Price at Expiry	Outcome
Very bearish	₹80	₹7 loss
Bearish	₹90	₹7 loss (max loss)
Neutral	₹100	₹1 loss (premium only)
Bullish	₹102	₹1 loss (premium only)

## Derivates for income generation – Covered Calls

A covered call involves holding a long position in an underlying asset and selling a call option on the same asset to generate income.

Eg: Jack earns the premium upfront (₹2 in this case).

If the stock rises to or stays just below the strike price (₹102), Jack benefits from both capital appreciation and the premium to the extent of ₹4. Gains are capped at ₹4, however if the stock rallies beyond this, Jack misses out on further profits.

The premium lowers Jack's effective cost basis (₹100 – ₹2 = ₹98) and helps in minor market declines.

If the stock stays flat or slightly up, the strategy can outperform a simple long position.

Scenario	Stock Price at Expiry	Outcome
Bearish	₹95	₹3 loss
Neutral	₹100	₹2 gain (premium only)
Bullish	₹102	₹4 gain (max profit)
Very Bullish	₹107	₹4 gain (capped)

# Can You Achieve Both? – Introducing Collars

Since covered calls carry unlimited downside risk, the fund will also use protective puts to create a **Collar Strategy**, providing downside protection while generating income.

A collar strategy involves holding a long position in an underlying asset (e.g., stock or futures), selling a call option on the same asset to generate income while also buying a put to protect against major downside.

Jack holds a stock at ₹100, he initiates -

- a long Put at ₹94 (Premium Paid: ₹1),
- a short Call at ₹103 (Premium Received: ₹2)
- Implying, net premium income: ₹1 received

The strategy allows Jack to receive net income through the options strategy. While the call option caps upside, the put position limits downside to his position. Herein, the collar strategy is enabled to reduce variability in returns either way.

In a nutshell, Premium reduces effective cost and helps generate income in sideways market.

Scenario	Stock Price at Expiry	Outcome
Very Bearish	₹92	₹5 loss (capped)
Bearish	₹97	₹2 loss
Neutral	₹100	₹1 gain
Bullish	₹102	₹3 gain
Very Bullish	₹107	₹4 gain (capped)

# Derivatives At Work – Arbitrage

## Q. What is Arbitrage?

**A: Arbitrage is simultaneous purchase & sale of a security in different markets to profit from price differences. In equities and derivatives, such price variation known as a spread can be leveraged for arbitrage opportunities.**

For Hedging

Lock-In risk free spread

Reduce Market Timing Risk

Cash and Carry Arbitrage	On the Day of Expiry		
	Scenario 1	Scenario 2	Scenario 3
Profit/loss when Stock Price moves to ₹1800	100	-200	0
Buy Stock @ ₹1700	100	-200	0
Sell Futures @ ₹1715	-85	215	15
Net Profit*	15	15	15
