

Optimize
Cancer Collaboration & Therapy

WHO WE ARE

We are the team that developed the first oncology electronic medical record (EMR) and the first clinical decision support system in an EMR.

REDUCING FRICTION

This experience drives our development of technology by and for oncology care and molecular diagnostics veterans, partnering with top engineers, to re-orient healthcare back on care.

OUR WORK

We start with your needs.

Physicians should have better access to the world's latest science, knowledge bases, and real-world evidence to make the optimal choices for each patient.

We are a data and services platform for your current workflow, driven by machine vision technology to unlock efficiencies.

Spesana includes virtual collaboration space for providers, pharma, payors and scientists. Instantly referring a patient from one provider to another accelerates the timeline for patients getting diagnosed and treated.

OUR PLATFORM

The Spesana platform interfaces with provider and payor systems, consolidates electronic medical records, lab information systems, payor and coverage information, molecular diagnostics reporting, and patient reported preferences.

Spesana also incorporates relevant scientific articles, pathways, guidelines and clinical knowledge bases and establishes a process to solicit expert opinions from within the institution and from outside specialists. This enables multi-domain decision support.

CAPTURE

Payer formularies, EMR data streams, molecular diagnostics and other systems are incorporated with medical records, payer policies, socioeconomic status, and relevant clinical literature are accessible.

CLARIFY

The information is contextualized for real time review by the physician and collaborating specialists on secure digital cards for easy sharing, real time review, or asynchronous collaboration.

ACT

Physicians, practices, specialists and payors get on the same page and stay on the same page by continuing the loop through the capture of new information, clarifying it and driving coordination.

WE CHALLENGE HEALTHCARE COMPLEXITY

A photograph of two male doctors in white lab coats shaking hands in a brightly lit hallway. The image is overlaid with a blue tint and serves as a background for the text on the right side of the page.

90%

of physicians report prior authorization processing is delaying care.

50%

of physician time in the office is consumed with clerical work.

\$4.6B

worth of physician burnout occurs annually.

\$812B

is spent on administration by U.S. insurers and providers, amounting to 34% of national health expenditures.

We hate cancer, and enough is enough.
