

Clear Visibility

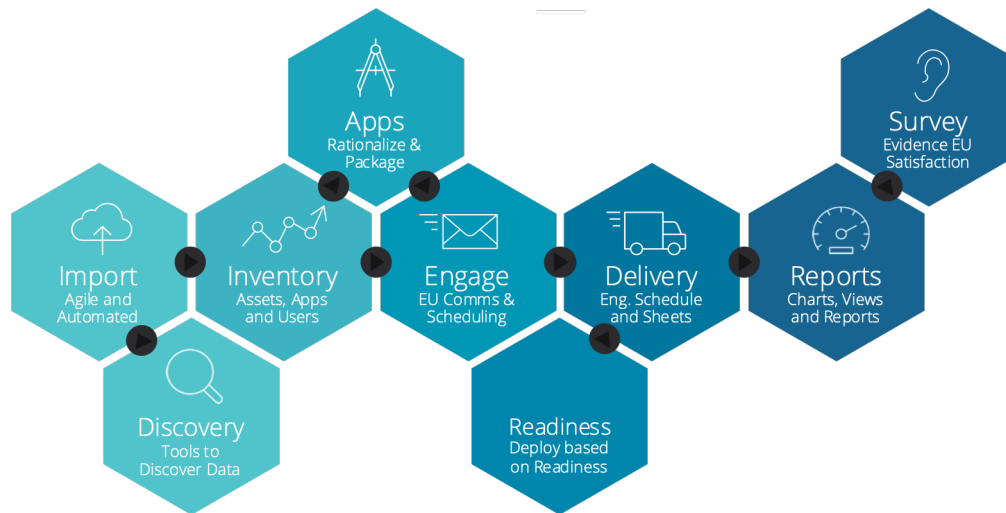

for Hardware Asset Management **CLEARVISIBILITY**

Gain simple and user-friendly visibility of your hardware assets

Effective management of hardware assets provides significant cost savings, both on hardware and subsequent software purchases during their lifecycle. By capturing information about the hardware life cycle with Clear Visibility, helps organisations make business decisions based on meaningful and measurable objectives.

Having Clear Visibility of the specification, location and department of where the hardware asset is allows IT operations to recoup any machines that are no longer needed, or from a user that has since left.

Clear Visibility tracks assets as they move through their lifecycle and eliminates spreadsheets and manual processes, enabling organisations to maximise hardware investments and make critical hardware lifecycle, migration and modernisation decisions.

Clear Visibility will enable processes to help save not only money, but also a lot of time on the service desks SLA's (service level agreements).

- Support IT functions (moves and changes, budgeting, asset tracking, inventory management)
- Support non-IT functions in Finance, legal, procurement, security, and governance
- Fast set up process with easy to understand results
- Maximise value / ROI on all assets both on-premise and in the cloud
