Clear Visibility

for Microsoft 365

CLEARVISIBILITY

Increase your software asset management by optimising M365 usage

Software compliance focuses on the inventory of your software and what you are paying for versus what you are using, yet research shows that many businesses do not track or monitor their Microsoft 365 usage, wasting IT budget in the process.

Likewise, users may not be benefiting from the software they are entitled to. This means businesses are not using what they pay for.

MS 365 Usage Efficiency

- **Few customers are here** (B)
- **Most customers are here** (F)

Included with Clear Visibility, the M365 module helps organisations recognise and manage the key factors for Microsoft 365 license optimisation.

These include: lapsed users, non-allocated applications, poor staff training, compliance or users on the wrong M365 subscription.

Clear Visibility is uniquely designed to provide immediate and accurate information of your software assets, quickly enabling the reduction of cost, complexity, and risk.

- Details license cost optimisation opportunities

- Fast set up process with easy to understand results

- Provides the granularity to be able to make specific decisions about improving the services and costs

- Improve user adoption for applications and services
