

FOR IMMEDIATE RELEASE

Award-Winning Author Dan M. Mrejeru Unveils Sixth Edition of *The Making, the Rise, and the Future of the Speakingman* — *It is dedicated to the Information Society.*

***A Terrestrial Mind Publishing announces a groundbreaking edition that
redefines the story of humanity for the Information Age.***

NEW YORK, NY — [Insert Release Date] — Visionary author and independent researcher **Dan M. Mrejeru** releases the highly anticipated **Sixth Edition** of his landmark work, *The Making, the Rise, and the Future of the Speakingman*, a sweeping interdisciplinary study of how humanity evolved — from primitive cognition to the digital consciousness of the modern age.

This newest edition, published by **A Terrestrial Mind Publishing, LLC**, adds a compelling new section titled “***The Information Society***”, expanding Mrejeru’s exploration of how changes in the brain’s energy consumption and associated neural processing have influenced human thought, behavior, and consciousness.

He documented how environmental factors influenced our brain consumption.

*“Our civilization mirrors the brain that created it,” says **Dan M. Mrejeru**. “As we transition into the Information Age, we are witnessing another cognitive revolution — one where human and artificial intelligences begin to converge.”*

A Landmark Study Bridging Science, Philosophy, and Civilization

The Making, the Rise, and the Future of the Speakingman is not just an evolutionary chronicle — it’s a bold reexamination of what it means to be human. Through meticulous research and

philosophical insight, Mrejeru reveals how climate change, geomagnetic events, linear and nonlinear neurological processes have shaped both the human brain and the civilizations that emerged from it.

The Sixth Edition expands the work's scope across **five major parts**, including a new, extensive section on *The Information Society*, which examines how it could influence our collective cognition.

Among the key themes explored:

- The evolution of human consciousness and language.
- The interplay between **nonlinear and linear thought processes** in shaping creativity and logic.
- The neurological effects of **geomagnetic and solar events** on human cognition.
- The societal transition from **matriarchal cooperation to material individualism**.
- The dawn of the **Information Society** — and the ethical, emotional, and intellectual challenges it brings.

“The Sixth Edition represents a crucial dialogue between science and soul,” says Mrejeru. “It invites readers to reconsider how evolution continues — not just biologically, but intellectually and spiritually — through the technologies we create.”

A Dedication Rooted in Legacy and Discovery

This edition is dedicated to **Spiru Haret (1851–1912)**, the Romanian mathematician, physicist, and pioneer of nonlinear dynamics who revolutionized modern education. Mrejeru also pays tribute to his daughter, **Anamaria Mrejeru**, a neuroscientist whose work inspired the author's exploration into biology, genetics, and the evolution of the modern brain.

“Knowledge is not inherited — it is rediscovered,” Mrejeru reflects. “Each generation lights the next step of our collective evolution.”

Why This Edition Matters

At a time when artificial intelligence and digital systems dominate global discourse, Mrejeru's *Sixth Edition* provides a timely and necessary lens through which to understand how technology is influencing our societies.

Bridging scientific depth with poetic insight, Mrejeru offers readers a journey through time — from the ancient savannas to the data-driven networks that define today's civilization. It is a work that speaks equally to **scientists, philosophers, educators, and curious readers** seeking to rediscover humanity's place in an ever-evolving world.

Premises of the Information Trade Society

In this thought-provoking discussion, Dan M. Mrejeru explores the evolutionary and cultural implications of climate on human adaptation and the formation of haplogroups. Drawing on recent research published by the University of Reading in *PNAS*, Mrejeru supports the theory that early primates evolved in cold, seasonal climates, challenging the long-standing belief that they originated in tropical environments. This adaptation to cold climates, Mrejeru suggests, influenced the development of human behaviors and social structures, with cold-climate haplogroups favoring collaboration for survival, while warm-climate haplogroups became more competitive and aggressive. He further delves into the philosophical and scientific contributions of Eastern cultures, particularly the ancient practices of spirituality, meditation, and complex systems theory, proposing that these insights are essential for shaping our modern Information Society. For further exploration, visit Mrejeru's full discussion on [Academia.edu](https://www.academia.edu).

About the Author

Dan M. Mrejeru is an award-winning author, philosopher, and independent researcher whose work integrates **anthropology, neuroscience, complexity theory, and philosophy**. Known for his rigorous yet accessible style, Mrejeru has devoted years to studying the nonlinear forces that shape consciousness, emotion, and civilization. His research and essays have gained global recognition for their originality and interdisciplinary scope.

Book Details

Title: *The Making, the Rise, and the Future of the Speakingman – Sixth Edition*

Author: Dan M. Mrejeru

Publisher: A Terrestrial Mind Publishing, LLC

Publication Date: August 2025

Paperback ISBN: 979-8-9930886-1-7

Hardcover ISBN: 979-8-9930886-1-7
E-book ASIN: B0FN6NXPFS
Category: Science / Philosophy / Human Evolution
Availability: Amazon and global online retailers

About A Terrestrial Mind Publishing, LLC

A Terrestrial Mind Publishing, LLC is a U.S.-based independent publishing house devoted to expanding human knowledge through groundbreaking works in science, philosophy, and culture. The company focuses on titles that challenge perception, inspire discovery, and foster critical thinking for the betterment of society.

Media Boilerplate Summary (for syndication use):

Dan M. Mrejeru's *The Making, the Rise, and the Future of the Speakingman – Sixth Edition* explores the evolution of human consciousness through the lens of science, philosophy, and digital transformation. Featuring a powerful new section on *The Information Society*, the book redefines the relationship between the brain, technology, and civilization. Available worldwide via *A Terrestrial Mind Publishing, LLC* and Amazon.
