Calculating a pro-rated replacement

(Batteries purchased prior to January 1, 2016)

- Determine the total number of months the battery was used (including the first three years).
- Multiply the cost per month by the total number of months used including the first three years.

Months Used x Cost Per Month = Cost
40 Months x \$2 Per Month = \$80 Cost

Calculating a limited warranty replacement

(Batteries purchased on January 1, 2016 and after)

- Determine how many years old the battery is.
- Use the corresponding Part Number and Age of Battery to identify the appropriate warranty price.

Original Price x Yearly Discount % = Discount | \$153.00 x 0.40 = \$61.20 Discount
Original Price - Discount = Warranty Price | \$153.00 - \$61.20 = \$91.80

For each battery purchased, a core battery must be returned. Otherwise, a non-recycling fee will be charged. All battery replacements should meet or exceed OE Cold Cranking ratings. Please carefully review all application information before replacement. If your application requires a different CCA to meet OE specifications, please contact us for additional options.
