The Ultimate Practice Shooting System for Shotgun Shooters

By: Phillip Barrus (16)

Junior Shooters never ceases to amaze me with the products you get a hold of and the Robert Louis Laser Shooter is no different. This laser shooter is truly amazing in many ways. For starters, the Robert Louis System is a great method of indoor practice! During winter, going out to the shooting range or a gun club just to practice is a daunting task due to weather alone, not to mention hunting season is coming to a close and we all want to spend as much time as we can in a duck blind. Well, the Robert Louis system is a great solution! This system allows you to truly practice like you would out at a gun club without leaving the comforts of your own home. It focuses on mount, swing, fire, lead, follow-through, and many other great shooting habits you have to master to become a consistently good shooter.

Another great benefit this system offers is the amount of money you save in practice. Everyone knows that shooting sports take money for shells, tickets, transportation, and equipment. But with the Robert Louis Laser Shooter, all those costs are eliminated! No shells required, no practice tickets, and no transportation costs. All you need is a shotgun and the Robert Louis Laser Shooting system. It's a great money saver and a phenomenal practice tool.

This product is also great for new shooters. The system allows new shooters to get the feel for their gun and lets them practice before they go to the shooting range. New shooters can be sensitive to recoil, and with this system there is no recoil because it is shooting a laser, not a shell. Also, new shooters sometimes have bad shooting techniques because of the lack of experience. Using this it can fix those before they ever set foot on a shooting range. If I had a new shooter who I was coaching, I would recommend this system.

Not only is the Laser Shooter great for new shooters, it's also good practice for the experienced. I found the system to be helpful and a good way to see where I was shooting. With the easy to see lasers, it's great for checking where your gun shoots and making sure you stay on target even when you aren't out shooting.

After using it, I could see how people would think that this laser system will save so much time and money that they will want to quit shooting at gun clubs. And while it will save you time and money, it can't replace the shooting range. It is a great tool and I was very impressed with it after testing it for several months, but it's not going to replace gun clubs. So don't go and buy this product and quit shooting at the range; that's not what it's for.

It is a great tool and one I think would be very beneficial to everyone, whether you've been shooting for years or are just getting started. I enjoyed using it.

Thanks again Andy and *Junior Shooters* magazine for another opportunity to test and review firearms and practice systems. *Shoot straight!* 🎯

The "Ultimate Practice Shooting System for Shotgun Shooters" is composed of four components plus your shotgun; the LASERSHOOTER, the LASERPRO, the WOBBLER, and the BANNER.

LASERSHOOTER

This allows shooters to check the accuracy of their gun fit, improve gun-mount technique and practice gun swing. The LaserShooter fits into the muzzle of a shotgun and centers itself perfectly to ensure continuous, accurate alignment from gun to target. The LaserShooter comes in 4 gauge sizes (12, 20, 28 and 410) which are usable for all gauges, from 10 gauge to 410) and 2 colors: an Ultra Brite Red Laser and a Super Brite Green Laser. Both LaserShooters can be used indoors, in poor ambient conditions and outside, but the Green LaserShooter is considerably brighter. For two shooters interested in practicing competitive shooting together, it is best for one person to use the Red LaserShooter and another the Green LaserShooter so it is easier to distinguish who is closest to the target.

Phillip is an excellent trap and skeet shooter as well as an avid bird hunter.

LASERPRO (WHITE LIGHTNING) MOVING TARGET PROJECTOR

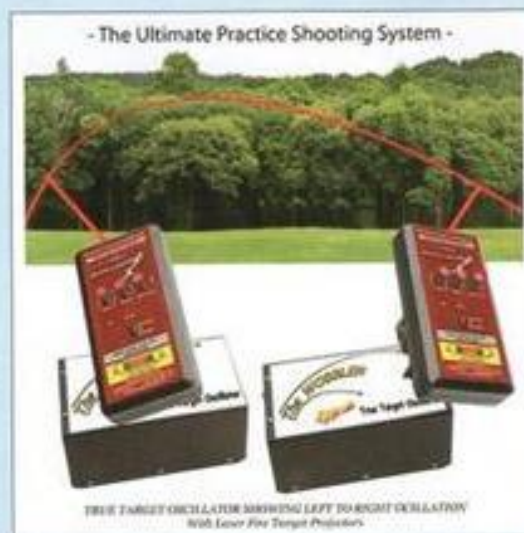

Shooters to practice and perfect their gun swing for different target types and methods of shooting. The LaserPro projects one or two moving targets in a straight line across a wall. With the LaserShooter in the muzzle of your shotgun, you can practice your mount, lead, swing, fire and follow through repeatedly. The LaserPro provides the constant repetition needed to perfect your shooting skills.

WOBLER

This is an oscillating mechanism that moves an attached LaserPro back and forth to duplicate real life Sporting Clays and Trap targets. Used alone, the LaserPro projects straight line targets; used with the Wobler, the LaserPro projects real-life targets that arch and move in unpredictable patterns.

SKEET and TRAP RANGE BANNER

The banner is great for practicing your skeet or trap shooting as though you were on an actual range. Flexible, lightweight, and easy to roll up, the banner can be hung on any wall with the sturdy brass grommets. The LaserPro can easily be adjusted so that the laser light appears to "fire" from the high and low skeet houses or from the trap house.

Editor's note: Robert Louis Company also has specific laser training systems for rifle and pistol as well as 3-Gun. Check them out at www.shotguncombogauge.com.
