Robert Louis Laser Shooter And LaserPro

With Robert Louis' Laser Shooter and LaserPro target projector, you can shoot at home at left- and right-flying or rising and falling targets, including simultaneous pairs. By changing the speed you can increase the shooting challenge to increase your skill level. Now Robert Louis has

added the Wobbler. When mounting the LaserPro to this oscillating device, a broad array of curved targets is available, letting the shooter practice presentations while duplicating the most difficult sporting clays or real flying bird action. Practicing 10-15 minutes a day will result in 200-250 mounts and swings at flying targets, supplying repetitions necessary to strengthen muscles. Repetition leads to muscle memory and ultimately to excellence in your sport. The device is helpful for youth coaches beginning training as well as for seasoned shooters building skills, especially on tough targets. (800) 979-9156; www.shotguncombogauge.com
