

THE SHOTGUN COMBO GAUGE™

Measures Length of Pull, Drop, Pitch and Cast

*“Gun fit isn’t the only thing;
it’s everything to the winning competitor!”*

**Shotgun Combo Gauge with Extension and 2 Drop Meters
(Second Drop Meter is optional)**

For the gunsmith, firearms retailer, manufacturer and gun hobbyist

Available for the first time in a single package, an accurate and convenient device that measures Length of Pull (LOP), Drop at comb and heel, angle of Pitch, and Cast on any gun. Length for drop measurement 28", length of pull 24". Both metric and inches. Aircraft aluminum construction. Bold numbers are easy to read. Remove the guess work and understand how proper fit leads to winning scores. For the target shooter, especially with the increasingly popular adjustable combs and recoil pads, the SHOTGUN COMBO GAUGE brings precision, repeatability and portability at an affordable price.

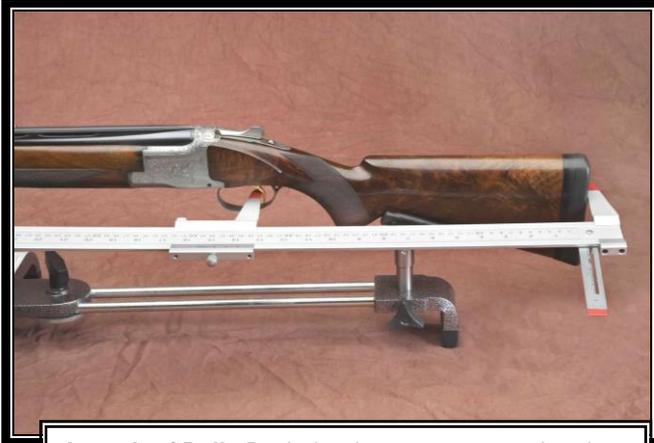

For those who require drop and pitch on side-by-side game guns with a swamped rib or long barreled guns, a 23" EXTENSION is available for bolting onto the basic Shotgun Combo Gauge (no modifications required). Using the extension maintains the portability and convenience of the Combo Gauge but increases the overall drop/pitch length to 48". Also, the magnet installed on the Extension "glues" the Combo Gauge to the rib, further enhancing its convenience and usability.

One Drop Meter is standard on the Shotgun Combo Gauge. A second Drop Meter can be added as an option, which gives greater versatility in measuring drop (you can measure at any two points along the comb simultaneously), or drop and pitch, or drop and cast simultaneously.

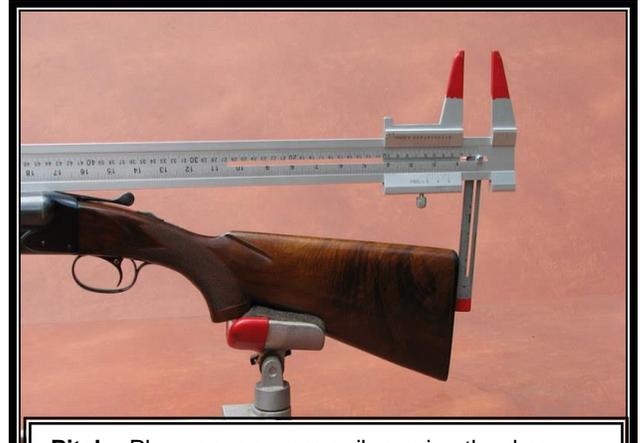

Measuring LOP, Drop, Angle of Pitch and Cast

Length of Pull

Length of Pull: Push the drop meter up so that the LOP is clear to be measured. Measure from inside trigger to end of stock. Read LOP at "0" mark.

Angle of Pitch

Pitch: Place gauge on gun rib moving the drop meter to the end of the butt plate. Extend drop meter to its total length and move parallel to the butt plate. Measure degrees of pitch with protractor.

Drop at Heel

Drop: Place gauge upside down on top of barrel length and extend to point on stock at which you want to measure drop, usually at heel or at comb. Slide 6" drop meter down to top of stock.

Drop at Comb

Measuring Cast

Cast: Mount Shotgun Combo Gauge with Extension on the center of gun rib. Set Drop Meter to low position parallel to the butt plate. Measure cast on or off with a ruler. Above gun shows "0" cast.

Measuring with the Dual Drop Meters

Measuring Drop at Heel and Comb Simultaneously

Measuring Drop at the Heel and Angle of Pitch Simultaneously

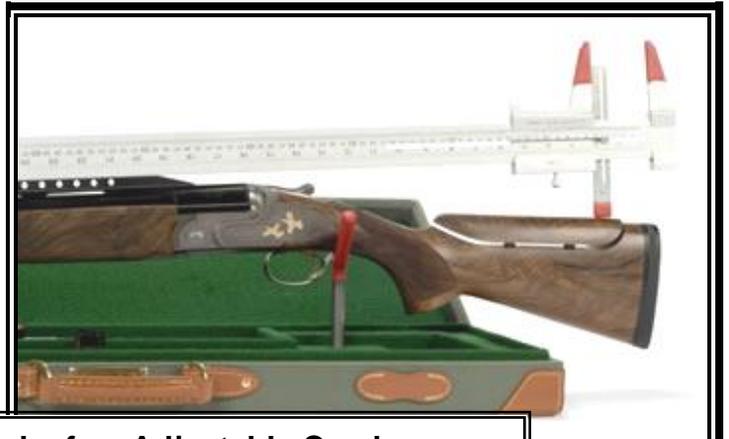

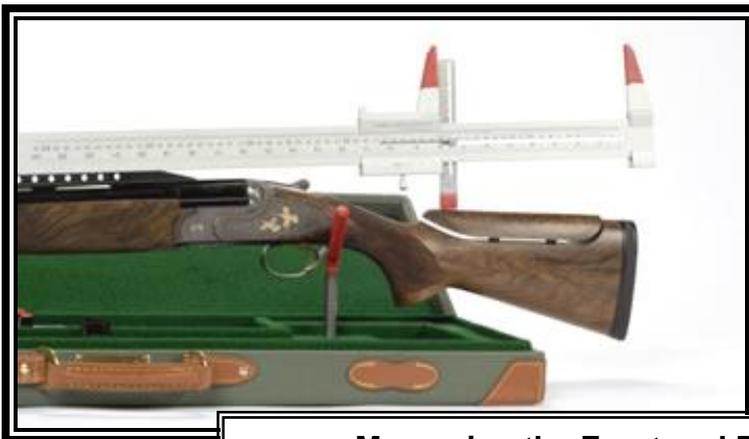

Measuring the Adjustable Comb Gun

Measuring this Adjustable Comb Caesar Guerini is easy using our Gun Fitter's Case, which serves as a Gun Rest and a storage case for the Shotgun Combo Gauge with Extension, BoreMaster, LaserShooter and LaserPro. Simply place the gun in the 2 yokes that support the gun, place the Shotgun Combo Gauge on the gun and measure away!

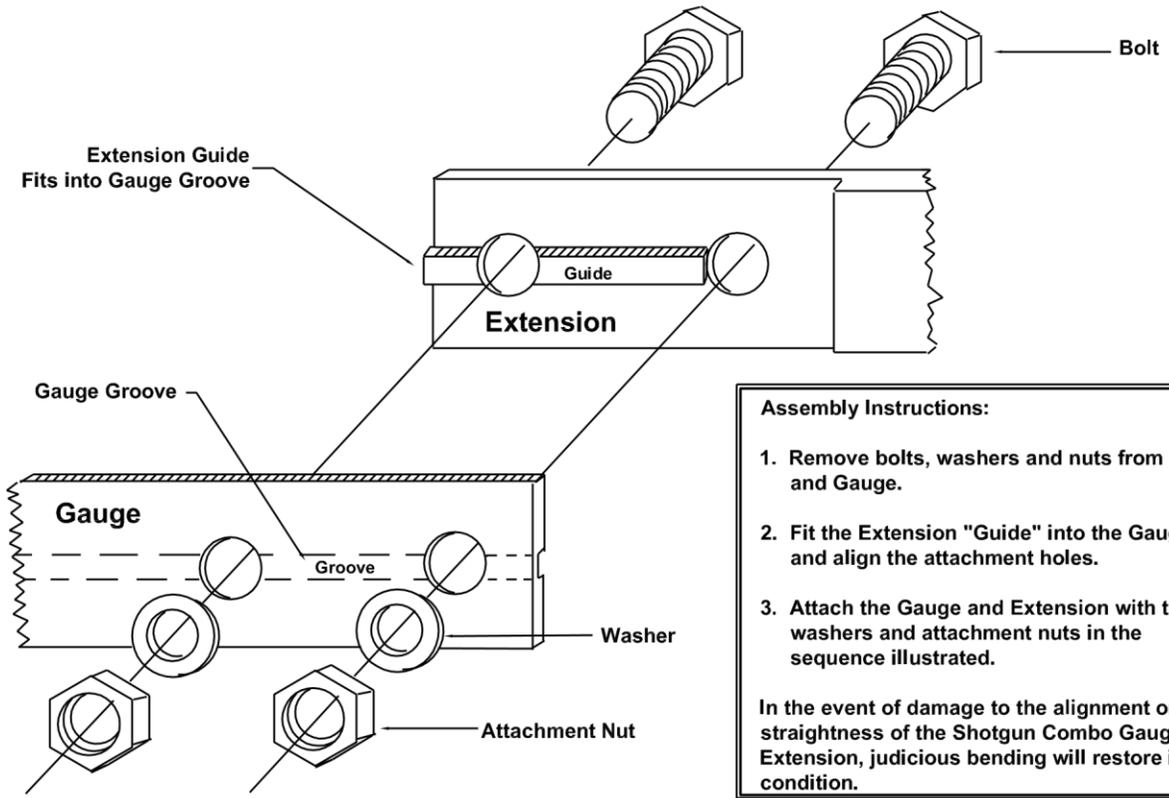

Measuring LOP

Measuring the Front and Back of an Adjustable Comb

Attaching the Extension to the Gauge

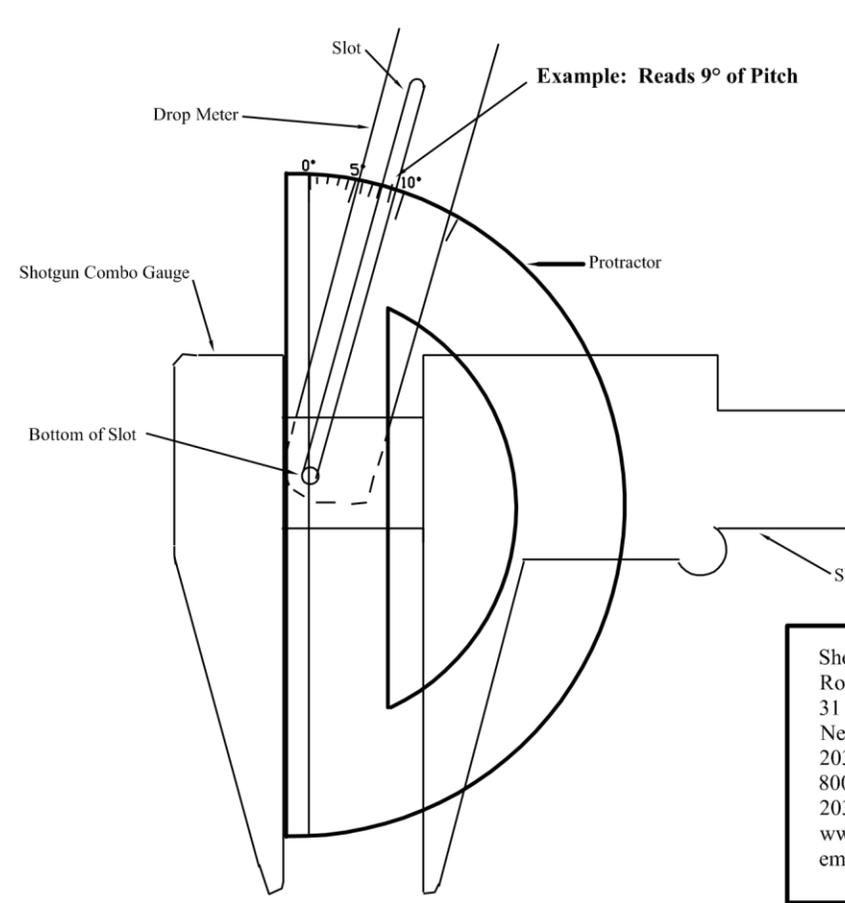

Assembly Instructions:

1. Remove bolts, washers and nuts from Extension and Gauge.
2. Fit the Extension "Guide" into the Gauge Groove and align the attachment holes.
3. Attach the Gauge and Extension with the bolts, washers and attachment nuts in the sequence illustrated.

In the event of damage to the alignment or straightness of the Shotgun Combo Gauge and Extension, judicious bending will restore its original condition.

Measuring Pitch

To Measure Pitch:

1. Pull Drop Meter down to bottom of the slot.
2. Rest Combo Gauge on gun rib and place so that the Drop Meter can be placed parallel to the gun butt measuring its angle.
3. Remove Combo Gauge and measure angle with protractor as illustrated in drawing.
