

STEAM BOILER RISK MANAGEMENT WORKSHOP

This workshop is aimed at Steam Boiler Operators, Managers and Health & Safety Managers.

Designed to be engaging and informative with practical assessments, we explore the operational, environmental, management and installation risks associated with your steam boiler assets.

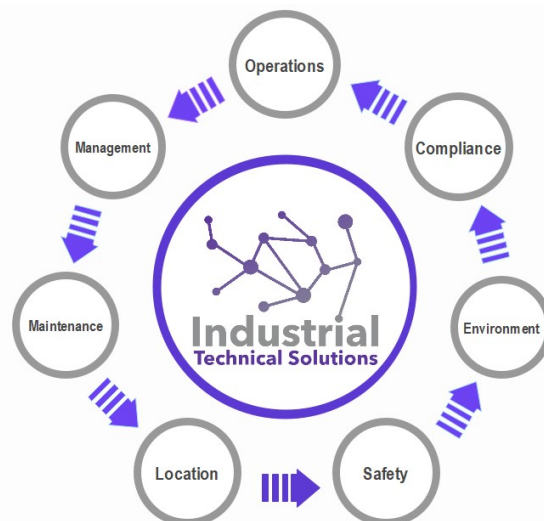

The outcome of this workshop is to allow Owners/ Operators of steam raising plant to understand the inherent risks associated to their specific site by understanding failure mechanisms and consequences.

On completion, with raised awareness you'll be able to improve standards, reduce risks and take the first steps in developing your own Technical Risk Assessment.
