

360 VIRTUAL TOURS

Why not have a bespoke virtual tour of your assets

Uses:

- Inductions
- Support Technical Risk Assessments
- Maintenance support
- Technical information
- Training
- Replace site visits
- Hazard Awareness

How

We use imaging technology to create a 360 real life image of your assets/ plant rooms/boilerhouses. Hosted in the cloud we then have the ability to attach and link information, data, procedures etc.. This allows secure access via any device connected to the internet for “street view” type walk throughs with assets flagged for key information.

Why use Industrial Technical Solutions?

With a background in the Process/Engineering industry we understand the needs of a business and what enhancements can be made to improve, Health and Safety, Operations and Training.

These tours can be used to support many site activities and in an increasing digital world affected by pandemic restrictions, this socially distanced system keeps employees and contractors safe.

With a virtual tour, you no longer have to wait for a supplier/sales engineer to attend site. Use the tour to walk them through the plant/process remotely. Speeding up response, reducing Carbon footprint and making effective use of everyone's time.

Follow the link above to access our demo tour online to see how it works:

- Follow the tags to Move around
- Click on the Flags for key information
- Use the map/floorplan to jump around
