

LIPOTROPIC INJECTIONS FOR WEIGHT LOSS

For Intramuscular Use

What are Lipotropic Injections?

Lipotropic (MIC) weight loss injections are a compounded formula of vitamins, amino acids and essential nutrients that shrink fat and help your body naturally create and boost energy. MIC stands for Methionine, Inositol, Choline and Carnitine. These are some of the ingredients in the weight loss injection.

How Does It Work?

These nutrients have a lipotropic effect on the body, in other words, they tell the body to use fat as an energy source instead of glucose (sugar). The B vitamins in the formula also optimize metabolism and therefore improve energy. Many report this improved energy helps them meet their exercise goals which further supports your weight loss goals. The injection works best when you are active, walking at least 10,000 steps per day, and are following a recommended nutritional plan.

How often do I need an injection?

If your goal is to lose less than 50 pounds you will need 1 injection (1 ml) once a week until you reach your weight loss goal. It is best to lose weight slowly so that it is more sustainable, and it does not affect your liver and hormones in a negative way. To lose more than 50lbs you will need 2 injections per week. 1-3 pounds weight loss a week is considered optimal. It is best to not get the injection late in the afternoon or evening as the extra energy it gives you may interfere with sleep.

Who should NOT get an MIC injection?

Those with Chronic Liver Disease and Renal Failure, Leber's Hereditary Optic Neuropathy, Megaloblastic anemia, or if you have allergies to any of the ingredients. Not to be used during pregnancy.

Benefits

- Weight Loss
- Appetite Suppression
- Improves Energy
- Increases Metabolism
- Enhances Mood
- Helps regulate sleep

FUNCTIONS

Methionine: helps break down sugars & carbohydrates and convert to energy

Inositol: Converts food to energy

Choline: Healthy nerve cells, cuts muscle recovery time, helps convert fat to energy

Cyanocobalamin: Energy, healthy nerve cells

L-Carnitine: Building blocks for proteins, helps body burn fat as fuel

Thiamine: Improves immune system, helps convert fat & carbohydrates into energy

Riboflavin: Increases metabolism, suppresses appetite

Pyridoxine: Promotes red blood cell production + converts food to energy

Methylcobalamin: Energy, healthy nerve cells, helps convert fat to energy

Package Information

Established Patients for 6 Week Package:

\$299.00

2 Office Visits

6 Injections

The first shot is given during the initial visit. Each shot thereafter may be given at the office or may be taken home for self-administration. Injections to be given once a week.

Established Patients for 6 Week Package:

\$450.00

2 Office Visits

12 Injections

The first shot is given during the initial visit. Each shot thereafter may be given at the office or may be taken home for self-administration. Injections to be given twice a week.
