

TRT Package - Professional Use Guide

FULL DESCRIPTION: The TRT (Testosterone Replacement Therapy) package is designed for men experiencing low testosterone levels. It

includes medical consultation, testosterone enanthate injections, and Anastrozole tablets. Testosterone plays a vital role in energy, mood, muscle mass, bone density, and sexual health. Anastrozole, an aromatase inhibitor, helps regulate estrogen levels that can rise due to testosterone supplementation.

BENEFITS:

- Restores testosterone to optimal levels
- Increases energy, motivation, and focus
- Enhances libido and sexual performance
- Promotes lean muscle mass and fat reduction
- Supports cardiovascular and bone health

DOSAGE PROTOCOL (As directed by a licensed medical provider):

- Testosterone Enanthate: Typically 100-200mg per week by injection
- Anastrozole: 0.25-1mg 1-3 times per week based on lab values
- Frequency and amount adjusted based on patient response and bloodwork
- Follow-up labs required every 8-12 weeks

USAGE METHOD: - Testosterone is administered intramuscularly

- Anastrozole is taken orally, per prescribed frequency
- Rotate injection sites and use sterile technique
- Regular lab monitoring is essential for safety and efficacy
