President Trump Act

By, [Hidee Trip](#)

[Mon, March 25, 2024](#)

Donald,

I know today is a day you and many others will remember, it is almost 6 am and I'm listening to the news and writing this request to you to Act on Jan 7, 2025. Please write an executive order to stop government financing EVs and abandon current mandates on climate control of prevention methods and suggest (not mandate) the economy take on and prosper with Pollution Control System that is engineered to clean the atmosphere including air, water, and land.

A friend of mine has the technology and has designed equipment to do just that. A retired NASA engineer devoted over 30 years to developing sound solutions. He joined the Elon Musk (XPRIZE) carbonremoval@xprize.org, Carbon Capture as POLLUTION CONTROLS Senoia, United States. I agree with him, let supply and demand drive what products America and the world choose to buy and not spend taxpayer money to subsidize pork project but push equipment development to correct the problem like lowering the co2 content in the with proven technology. EVs may be good for the environment but they are not the solutions needed to correct the total pollution of today and the ones tomorrow.

One of the patents of [Pollution Controls](#) is carbon capture directly from the air and it also generates a by product of Electricity in the process. It can capture as all the emission from combustion vehicles and provide Battery charging electricity for future needs of increased EV as the demand increase.
