

**Retail Hydrogen Station Network Status in California**

Last Updated April 9, 2026

Several hydrogen stations are unavailable due to a disruption in the gaseous hydrogen supply chain that began in February 2026.

Higher-capacity liquid hydrogen stations are gradually coming back online. Hydrogen deliveries to these stations have been scheduled, however there will be delays due to backlog (see table below).

Impacted stations are marked “unavailable” with a grayed-out square icon. As a result, operational stations are experiencing significantly higher-than-normal demand.

Drivers are encouraged to use [SOSS](#), which is updated in real-time. Drivers can report the number of vehicles in the queue and the number of dispensers available by logging in to their SOSS account.
