

TERM2000 IP67

The new generation of waterproof infrared heaters!

The innovation: the new, waterproof TERM2000 IP67 for instant heat in all outdoor areas! The powerful infrared heater is equipped with a top-grade infrared gold tube that reliably delivers maximal warmth even in dampness or snow in all outdoor areas. Due to its open construction (without glass cover), the TERM2000 IP67 reaches a very high service life of up to 5,000 hours. The ULTRA LOW GLARE tubes installed in the radiant heaters have red light content reduced by up to 80% compared to conventional models and thus offer an eye-friendly ambience. The elegant and slim housing design of the innovative infrared heaters is suitable for mounting against the wall or under the ceiling, can be mounted on a tripod, under awnings and is suitable for integration in a tent systems and under umbrellas.
