Adverse Childhood Experiences (ACE)

The ACE Questionnaire is a 10 item measure used to measure childhood trauma. The score can range from 0-10 depending on the exposure to any one of the following items:

- emotional abuse
- physical abuse
- sexual abuse
- emotional neglect
- physical neglect
- parental separation/divorce
- household physical violence
- household substance abuse
- household mental illness or suicide attempt
- incarcerated household member

Overall score indicates the person is at risk for:

- Chronic disease
- Mental illness
- Violence
- Being a victim of violence
- Emotional, cognitive, social and biological function
- Drug/alcohol abuse and interpersonal/self-directed violence

Compared with people with 0 ACEs, people with ≥ 5 ACEs were 7 to 10 fold more likely to report illicit drug use problems, addiction to illicit drugs, and parenteral drug use.*
