## REVICELL *PRO*

With exclusive **3DLAYER® RF** technology, it works specifically on each layer of the skin.

**Lifting multilayer**

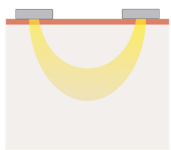

**SISNEO BIOSCIENCE®**

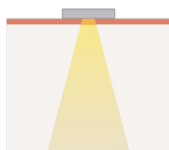

---

- ✓ Non-surgical / Non-invasive
- ✓ Quickly visible results
- ✓ Safe and painless treatment

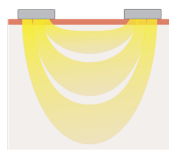

**Revicell Pro** represents the breakthrough in non-surgical rejuvenation using the exclusive **3DLAYER® RF** technology combined with biophotonic therapy.

Bipolar / Multipolar

Monopolar

Tecnol. **3DLAYER® RF**

### Technological Revolution, **3DLAYER® RF**

**3DLAYER® RF** technology manages to treat the different layers of the skin in a specific way using an intelligent variable frequency system capable of working from the most superficial to the deepest layers.

With conventional equipment (monopolar, bipolar, tripolar, etc.) the treatment is only effective in certain layers of the skin depending on its type and very ineffective in the rest. By means of **3DLAYER® RF** technology and its variable frequency

emission, **Revicell Pro** equipment allows to perform each treatment in a specific way, thus achieving the best results.

The **3DLAYER® RF** technology incorporates a comprehensive control of the emitted power, controlling the energy accumulation in the tissue and the effect on it. By controlling the energetic dosage we can perform the different treatments from the stimulation or selective thermal damage side.

### Combination with Biophotonic Therapy

Biophotonic therapy converts light energy into chemical and physical reactions that achieve different effects in the organism at the molecular and cellular level, and even destroy some specific bacteria.

Emission at **590 nm.** induces an increased production of collagen and

elastin by photostimulation of fibroblasts. Optional **420 nm.** applications can be requested for anti-acne treatments.

The **Revicell Pro** equipment combines both technologies by means of applicators specifically designed for each treatment (facial, hair and body) achieving enhanced results.

### Minimalist design with aerospace-grade materials

The **Revicell Pro** unit and its accessories are made of aerospace-grade materials, using the latest advances in materials engineering. Central unit in machined duraluminum, wiring from the robotics industry for durability, 316L surgical steel electrodes, anti-scratch coating of thermoplastic surfaces, push-pull medical connectors, among others.
