 COLLAGENILUSA

Collagenil Intense Revive, global-recovery mask, is an advanced active infusion treatment with second skin technology to achieve smoother, more radiant skin.

Simultaneously, the synergy between low and medium molecular weight hyaluronic acid, Fitoestratti Bioattivi GlowAGE™ and the Complezzo Peptidico WKPep® allows it to restore the skin's natural radiance and promote a deep moisturizing action, increasing tissue firmness and elasticity.

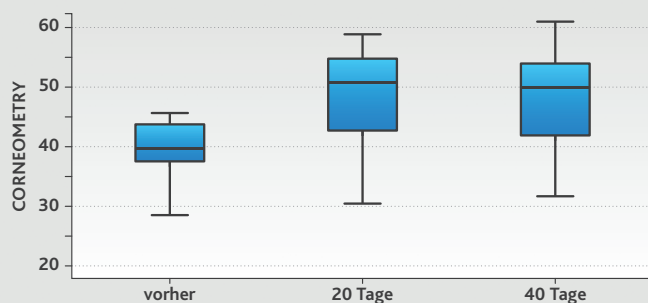

Also designed to be used as an all-in-one solution to smooth fine lines and wrinkles, counteract loss of tone and dull complexion, resulting in a radiant, youthful complexion. It can also be used for skin that has previously undergone aesthetic medicine treatments or procedures (filler, chemical peels, laser, and needling).

• Efficacy of double molecular weight HA on skin elasticity and hydration

TEST

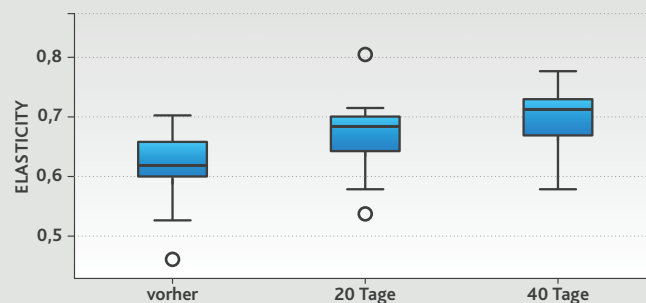

A total of 20 female subjects with healthy skin in the age range of 45 to 60 years were enrolled in the study:

- before product use (T0)
- after 20 (T20)
- after 40 days (T40).

Hydration of the skin over the course of the trial

At both assessments (after 20 and 40 days), skin hydration significantly improved compared with baseline ($P < .001$).

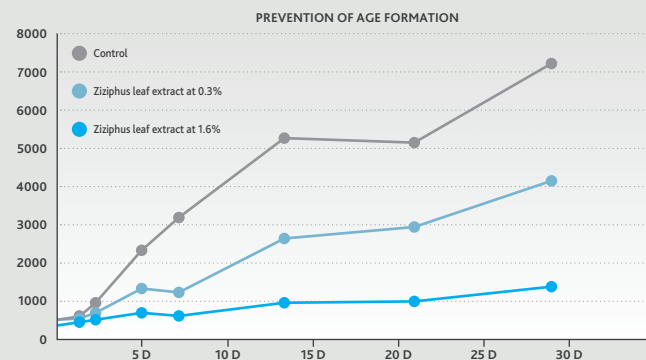

Elasticity

A continuous decrease in skin roughness was observed during the study. The differences were significant. The gain in elasticity was significant for each comparison ($P < .001$).

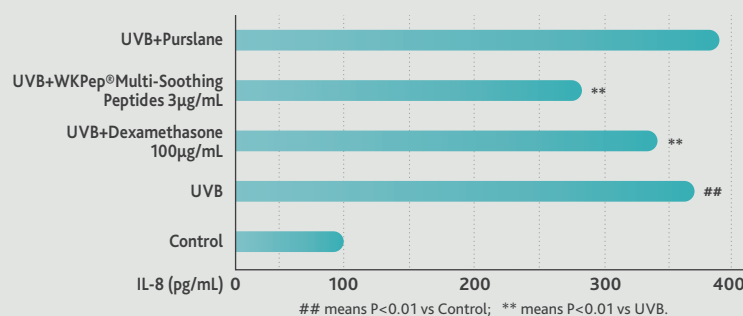

• GlowAGE™ prevents the formation of advanced glycation final products for an illuminating effect

Treatment with GlowAge inhibited AGE formation in a concentration-dependent manner as follows:

- 0.3% Ziziphus spina-christi leaf extract reduced AGE formation by 42.8% after 28 days.
- 1.6% of Ziziphus spina-christi leaf extract reduced the reaction by 71% after 28 days.

• Antinflammatory effect of WKPep® peptide complex

The antinflammatory effect is 30 times stronger than dexamethasone
